Together —we're— AMPing DOWN
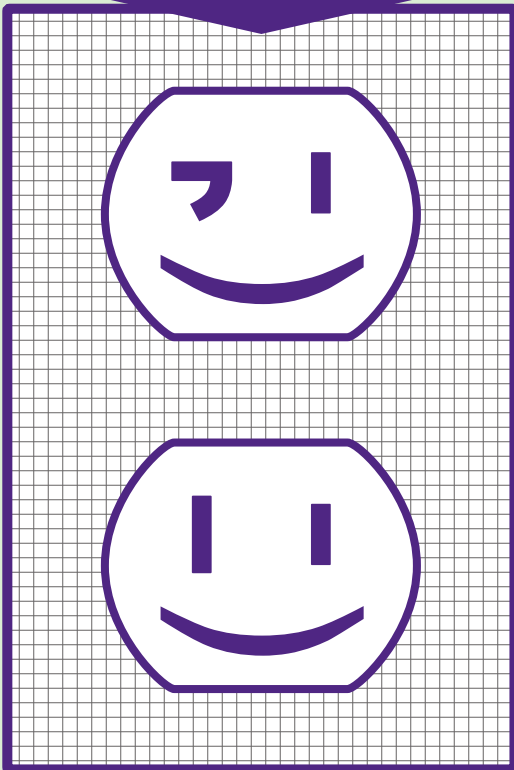

Reduced cooling in campus buildings from 2:00 p.m. – 6:00 p.m.

'Watt' can you do?

☑ Turning off your computer at the end of each day could save 60,000 kWh per year, enough electricity to power 2 average Canadian homes for an entire year.

☑ Turn your lights out when leaving the office. Leaving lights on unnecessarily even for just 2 hours a day consumes 86,000 kWh per year, enough to power 3 average homes for an entire year, also the equivalent of emissions from 11 cars over one year.

☑ Unplugging printers when not in use could save 91,000 kWh per year, which could power 3 Canadian homes for one year.

* Values are calculated assuming 1,000 staff members.
