Man will never walk on the **moon**.

No one will ever **run** a four-minute mile.

It is impossible to **read** minds.

The Schlich School of Medicine and Dentistry – at The University of Western Ontario – is home to Canada’s leading brain imaging facility. In partnership with Robarts Research Institute, these scientists are not only looking into the brain, they are observing thinking while it happens.

Western’s leadership in the development of medical imaging instrumentation and techniques is empowering medical practitioners around the world to save lives by detecting and treating medical conditions such as Alzheimer’s, cancer and cardiovascular disease at the earliest stages.

As a leading research-intensive university, Western develops and operates some of the most advanced large-scale research facilities in the world, provides an exceptional university experience for its students, and continues a long tradition of transforming what is impossible today into certainties we will take for granted tomorrow.

**RESEARCH** what Western can do for you.
