No one will ever **split** the atom.

**Mechanical flight** will not be possible.

There will never be a **cure** for AIDS.

In Mwanza, Tanzania, The University of Western Ontario, and their partners at Lawson Health Research Institute, are working with mothers to make a probiotic yogurt that boosts immunity in HIV/AIDS patients. Simultaneously, Western professor, Dr. Yong Kang is moving his technology past a point where all other potential vaccines have failed – into pre-clinical animal toxicology trials – closer to a cure than anyone has ever been.

As a leading research-intensive university, Western develops and operates some of the most advanced large-scale research facilities in the world, provides an exceptional university experience for its students, and continues a long tradition of transforming what is impossible today into certainties we will take for granted tomorrow.

**RESEARCH** what Western can do for you.
