The world is flat.

The sound barrier will never be broken.

There is no such thing as a hurricane proof house.

At The University of Western Ontario’s Insurance Research Lab for Better Homes, some of the best minds from around the world are increasing our chances of surviving environmental disasters. In the first facility of its kind in the world, a research team builds – then destroys – full-size houses. What they are learning is leading to changes in construction methods, and is mitigating the financial and human costs of catastrophic weather events.

As a leading research-intensive university, Western develops and operates some of the most advanced large-scale research facilities in the world, provides an exceptional university experience for its students, and continues a long tradition of transforming what is impossible today into certainties we will take for granted tomorrow.

RESEARCH what Western can do for you.
