

Join the team conducting ground-breaking cognitive neuroscience and imaging research at Western University!

Western ranks as one of Canada's top research-intensive universities. From fundamental to applied discovery, its researchers advance knowledge that provides tangible benefits for the economic, social, health and cultural development of citizens in London, in Canada and around the world. While the University has achieved acclaim for research in a full complement of disciplines, it has identified signature areas in which global-scale clusters of research excellence have been established, including Neuroscience / Brain & Mind.

Western University's BrainsCAN initiative recently received a substantial \$66 million investment from the Canada First Research Excellence Fund (CFREF). Already ranked amongst the best in the world in cognitive neuroscience and neuroimaging, Western excels in the breadth of cognitive, computational, clinical, technological, and translational approaches required for understanding and intervening in brain function.

The goal of BrainsCAN is to significantly reduce the impact of cognitive disorders across the lifespan. To do this, our scientific approach will identify how cognitive markers map onto specific brain networks using our state of the art behavioural and imaging platforms.

Reporting to the Director of the BrainsCAN Human Cognition and Sensorimotor Core (HSC Core), the **Community Research Coordinator** will work in collaboration with faculty, trainees and research teams on BrainsCAN research projects. The incumbent is responsible for facilitating recruitment, enrolment, scheduling and retention of research participants living in the community for BrainsCAN research projects, ensuring compliance with policies and procedures related to ethical standards, research and privacy. The incumbent liaises with London area health organizations, associations, school boards, and support groups for the recruitment of research participants, by establishing effective relationships and promoting and responding to inquiries related to the research.

The Community Research Coordinator supports the development and management of a research participant database and provides progress reports and data for use by the research team. The incumbent participates in the development of marketing materials, identifies and acts on opportunities to increase awareness of BrainsCAN-related research involving community participants, and liaises with a variety of stakeholders to build research capacity and ensure the successful coordination of all tasks to achieve the research outcomes.
