

**THE UNIVERSITY OF WESTERN ONTARIO
BIOLOGICAL AGENTS REGISTRY FORM**
Approved Biohazards Subcommittee: October 14, 2010
Biosafety Website: www.uwo.ca/humanresources/biosafety/

This form must be completed by each Principal Investigator holding a grant administered by the University of Western Ontario (UWO) or in charge of a laboratory/facility where the use of Level 1, 2 or 3 biological agents is described in the laboratory or animal work proposed. The form must also be completed if any work is proposed involving animals carrying zoonotic agents infectious to humans or involving plants, fungi, or insects that require Public Health Agency of Canada (PHAC) or Canadian Food Inspection Agency (CFIA) permits.

This form must be updated at least every 3 years or when there are changes to the biological agents being used.

Containment Levels will be established in accordance with Laboratory Biosafety Guidelines, 3rd edition, 2004, Public Health Agency of Canada (PHAC) or Containment Standards for Veterinary Facilities, 1st edition 1996, Canadian Food Inspection Agency (CFIA).

Completed forms are to be returned to Occupational Health and Safety, (OHS), (Support Services Building, Room 4190) for distribution to the Biohazards Subcommittee. For questions regarding this form, please contact the Biosafety Officer at extension 81135 or biosafety@uwo.ca. If there are changes to the information on this form (excluding grant title and funding agencies), contact Occupational Health and Safety for a modification form. See website: www.uwo.ca/humanresources/biosafety

PRINCIPAL INVESTIGATOR	<u>Kim, Sung Ouk</u>
DEPARTMENT	<u>Microbiology and Immunology</u>
ADDRESS	<u>Siebens-Drake Research Institute, Rm119, 1400 Western Road, London, ON</u>
PHONE NUMBER	<u>519-850-2961</u>
EMERGENCY PHONE NUMBER(S)	<u>519-520-9546</u>
EMAIL	<u>sung.kim@schulich.uwo.ca</u>

Location of experimental work to be carried out: Building(s) Siebens-Drake Research Institute, Room(s): 119

*For work being performed at Institutions affiliated with the University of Western Ontario, the Safety Officer for the Institution where experiments will take place must sign the form prior to its being sent to the University of Western Ontario Biosafety Officer (See Section 15.0, Approvals).

FUNDING AGENCY/AGENCIES: CIHR, NSERC and ERA

GRANT TITLE(S): Investigating the mechanisms of Nod-like receptor-induced cytokine release and cell death in macrophages (CIHR), Investigating immunomodulating mechanism of probiotics (NSERC), Molecular and signaling mechanisms of macrophage cell death and immune regulation (ERA)

List all personnel working under Principal Investigators supervision in this location:

<u>Name</u>	<u>UWO E-mail Address</u>	<u>Date of Biosafety Training</u>
<u>Soon-Duck Ha</u>	<u>Sha3@uwo.ca</u>	<u>2005</u>
<u>SangWook Park</u>	<u>Spark367@uwo.ca</u>	<u>April, 2009</u>
<u>Shahab Meshkibaf</u>	<u>smeshkib@uwo.ca</u>	<u>May, 2011</u>
<u>Chaeyoung Han</u>	<u>Chan45@uwo.ca</u>	<u>May, 2011</u>
<u>Macon Coleman</u>	<u>mcolem4@uwo.ca</u>	<u>July, 2011</u>

Please explain the biological agents and/or biohazardous substances used and how they will be stored, used and disposed of. Projects without this description will not be reviewed.

1) Microbes: Live *Salmonella Typhimurium* SL1344 and *Salmonella* Pathogenicity Island (PSI) I and/or II deleted mutants (obtained from Dr. Coombes, McMaster University), *Pseudomonas aeruginosa* PA103 wild-type and ExoU mutant strain (obtained from Dr. Kazmierczak, Yale University), *E. coli* and *L. rhamnosus* will also be used to activate macrophages in vitro or treated to mice in vivo through oral or rectal routes.

2) Substances: Lethal toxin (Protective antigen and Lethal factor), LPS (lipopolysaccharide) or *Salmonella* flagellin (InvivoGen) together with the cationic lipid DOTAP (Roche Applied Science) will be used to treat cells including bone-marrow derived macrophages, dendritic cells and various cell lines.

3) Plasmids: Vectors expressing PA (*E. coli*-BL21) and LF (*Bacillus megaterium*) will be used to express LeTx toxin, followed by purification. Other mammalian expression vectors (including pRK5-HA-Ubiquitin-K48R and pRK-HA-Ubiquitin-K48, from Addgene, Cambridge, MA) will be used to transfect mammalian cell lines to examine their localization, interaction and function.

All biological agents and biohazardous substances are stored in -80 ultrafreezer or -20 freezer in locked room at the SDIR. These agents and substances will be disposed in autoclave bag which will be autoclaved before being discarded as regular garbage, or will be inactivated by bleach.

Please include a one page research summary or teaching protocol.

CIHR: Macrophages are key cells of the innate immune system that engulf and kill invading pathogens. In addition, macrophages respond to infection by releasing inflammatory cytokines and act as antigen-presenting cells to T lymphocytes to initiate adaptive immune responses. Thus, it is not surprising that many bacterial pathogens actively secrete toxins and other effectors that target macrophages. A family of intracellular innate immune receptors termed the nucleotide-binding domain and leucine-rich repeats (NLRs) plays a pivotal role in the detection of microbial components in the cytoplasm of host cells. Activation of NLRs leads to secretion of key proinflammatory cytokines (e.g. interleukin (IL)-1 β and IL-18), but at the same time NLR activation can also induce macrophage cell death. Macrophage cell death mediated by NLR signaling upon engagement of NLRs with diverse bacterial pathogens is emerging as a common theme in bacterial pathogenesis. However, the mechanism and signaling events leading to NLR-induced macrophage death and the pathophysiological role of this process in infection remain largely unknown.

Understanding how macrophages respond to bacterial infection and/or bacterial products is a major area of focus in our laboratory. We have discovered that the lysosome-associated proteins, Laptm5 (lysosomal-associated multi-membrane spanning protein) and cathepsin B, and the mitochondria-associated proteins Bnip3 (mitochondrial proteins Bcl-2/adenovirus E1B 19 kDa-interacting protein 3) and Bnip3L (Bnip3-like) are involved in NLR-induced IL-1 β release and cell death. Based on the above and also on a body of strong preliminary data, we hypothesize that (i) NLR-mediated cell death targets lysosomal and mitochondrial membrane proteins, which are critical to maintain macrophage cell homeostasis and prevent cell death; and (ii) NLR-dependent pathogen-mediated macrophage cell death is relevant for pathogenesis in vivo. To address these hypotheses, we propose three specific objectives:

1) To elucidate the role of lysosomal membrane destabilization, cathepsin B, and Laptm5 in IL-1 β release and cell death.

2) To assess the role of mitochondrial dysfunction mediated by Bnip3 and Bnip3L in cell death.
3) To investigate the role of NLR-induced cytokine release and macrophage death in the pathogenesis of Salmonella enterocolitis
We believe this research will help elucidate key processes taking place after a pathogen engages host cells of the innate immune system, and may uncover alternative targets for the design of novel therapeutic tools to treat infectious and inflammatory diseases.

NSERC: Probiotics are 'living micro-organisms that when administered in adequate amounts confer a health benefit to the host'. An increasing number of studies provide scientific evidence for the efficacy and efficiency of probiotics in alleviating several inflammatory diseases. However, the specific mechanisms by which probiotic bacteria contribute to health, and, especially, their anti-inflammatory properties remain poorly understood. This research program is to investigate the signaling and molecular immunomodulatory mechanisms of probiotics. We have shown that probiotic strains of Lactobacillus rhamnosus are potent inducers of G-CSF production, which suppresses production of the pro-inflammatory cytokine tumor necrosis factor (TNF) in activated macrophages. We hypothesize that L. rhamnosus preferentially induces G-CSF in monocytes/macrophages, which is a key anti-inflammatory cytokine mediating immunomodulatory effects on macrophages and dendritic cells. To address the hypothesis, we propose the following four specific research objectives: 1) Investigating the signaling mechanism of G-CSF production in L. rhamnosus-activated macrophages, 2) Investigating the effect of G-CSF on macrophages, 3) Investigating the mechanism of G-CSF in regulating macrophage activation and 4) Investigating the role of G-CSF on dendritic cells. This research program will provide information about the ill-defined mechanisms of the immunomodulatory effects elicited by probiotics. The immunomodulatory role of G-CSF in dendritic cells and T cells is an emerging concept and its detailed mechanism remains to be delineated. This research program will also reveal the signaling mechanism by which G-CSF induces immunomodulation in both macrophages and dendritic cells. Within five years, we will have not only significantly advanced an important immunological field, but also revealed key mechanisms involved in probiotic function. Our research will also help designing new probiotic products to better induce anti-inflammatory effects, which ultimately may benefit the growing number of people with inflammatory diseases.

1.0 Microorganisms

1.1 Does your work involve the use of biological agents? YES
(non-pathogenic and pathogenic biological agents including but not limited to bacteria and other microorganisms, viruses, prions, parasites or pathogens of plant or animal origin)? If no, please proceed to Section 2.0

Do you use microorganisms that require a permit from the CFIA? Yes
If YES, please give the name of the species. Bacillus anthracis Sterne strains, Salmonella typhimurium, Pseudomonas aeruginosa, E. coli

What is the origin of the microorganism(s)? soil or human

Please describe the risk (if any) of escape and how this will be mitigated:
_____ None _____

Please attach the CFIA permit.
Please describe any CFIA permit conditions:

1.2 Please complete the table below:

Name of Biological Agent(s)* (Be specific)	Is it known to be a human pathogen? YES/NO	Is it known to be an animal pathogen? YES/NO	Is it known to be a zoonotic agent? YES/NO	Maximum quantity to be cultured at one time? (in Litres)	Source/ Supplier	PHAC or CFIA Containment Level
Bacillus anthracis Sterne	<input type="radio"/> Yes	<input type="radio"/> Yes	<input type="radio"/> Yes	10 ml	FDA, USA	2
Salmonella typhimurium	<input type="radio"/> Yes	<input type="radio"/> Yes	<input type="radio"/> Yes	10 ml	McMaster University	2
Pseudomonas aeruginosa	<input type="radio"/> Yes	<input type="radio"/> Yes	<input type="radio"/> Yes	10 ml	Yale University	2
Escherichia coli (GR-12, DH5 alpha, HB101, 1212, 1214, AD110, J96, Nissle 1917)	<input type="radio"/> Yes	<input type="radio"/> Yes	<input type="radio"/> Yes	4 L	UWO	1
Lactobacillus rhamnosus	No	No	No	10 ml	UWO	1

*Please attach a Material Safety Data Sheet or equivalent from the supplier.

2.0 Cell Culture

2.1 Does your work involve the use of cell cultures? YES
 If no, please proceed to Section 3.0

2.2 Please indicate the type of primary cells (i.e. derived from fresh tissue) that will be grown in culture:

Cell Type	Is this cell type used in your work?	Source of Primary Cell Culture Tissue	AUS Protocol Number
Human	Yes	Peripheral blood	Not applicable
Rodent	Yes	Intestine, peritoneum, peripheral blood, bone marrow, spleen	2008-023 2010-222 2009-015
Non-human primate	No		
Other (specify)	No		

2.3 Please indicate the type of established cells that will be grown in culture in:

Cell Type	Is this cell type used in your work?	Specific cell line(s)*	Containment Level of each cell line	Supplier / Source of cell line(s)
Human	<input type="radio"/> Yes	THP-1, HEK293, HepG2, Caco2, U937, NPC-1, fibroblast	II	ATCC
Rodent	<input type="radio"/> Yes	RAW264.7 CHO, L929	II	ATCC
Non-human primate	<input type="radio"/> No			
Other (specify)	<input type="radio"/> No			

*Please attach a Material Safety Data Sheet or equivalent from the supplier. (For more information, see www.atcc.org)

2.4 For above named cell types(s) indicate PHAC or CFIA containment level required 2

3.0 Use of Human Source Materials

3.1 Does your work involve the use of human source materials? YES

If no, please proceed to Section 4.0

3.2 Indicate in the table below the Human Source Material to be used.

Human Source Material	Source/Supplier /Company Name	Is Human Source Material Infected With An Infectious Agent? YES/UNKNOWN	Name of Infectious Agent (If applicable)	PHAC or CFIA Containment Level (Select one)
Human Blood (whole) or other Body Fluid	volunteers	<input type="radio"/> Unknown		<input type="radio"/> 2
Human Blood (fraction) or other Body Fluid	volunteer	<input type="radio"/> Unknown		<input type="radio"/> 2
Human Organs or Tissues (unpreserved)	N/A	<input type="radio"/> Yes <input type="radio"/> Unknown		<input type="radio"/> 1 <input type="radio"/> 2 <input type="radio"/> 2+ <input type="radio"/> 3
Human Organs or Tissues (preserved)	N/A	Not Applicable		Not Applicable

4.0 Genetically Modified Organisms and Cell lines

4.1 Will genetic modifications be made to the microorganisms, biological agents, or cells described in Sections 1.0 and 2.0? NO If no, please proceed to Section 5.0

4.2 Will genetic modification(s) involving plasmids be done? YES, complete table below NO

Bacteria Used for Cloning *	Plasmid(s) **	Source of Plasmid	Gene Transfected	Describe the change that results from transformation or tranfection

* Please attach a Material Data Sheet or equivalent if available.

** Please attach a plasmid map.

4.3 Will genetic modification(s) of bacteria and/or cells involving viral vectors be made? No, complete table below NO

Virus Used for Vector Construction	Vector(s) *	Source of Vector	Gene(s) Transduced	Describe the change that results from transduction

* Please attach a Material Safety Data Sheet or equivalent.

4.4 Will genetic sequences from the following be involved?

- ◆ HIV NO
- ◆ HTLV 1 or 2 or genes from any Level 1 or Level 2 pathogens NO
- ◆ SV 40 Large T antigen NO
- ◆ E1A oncogene No
- ◆ Known oncogenes YES, please specify: c-raf, c-ras ○ NO
- ◆ Other human or animal pathogen and or their toxins No

4.5 Will virus be replication defective? YES

4.6 Will virus be infectious to humans or animals? NO

4.7 Will this be expected to increase the containment level required? NO

5.0 Human Gene Therapy Trials

5.1 Will human clinical trials be conducted involving a biological agent? NO
 (including but not limited to microorganisms, viruses, prions, parasites or pathogens of plant or animal origin)
 If no, please proceed to Section 6.0

5.2 If YES, please specify which biological agent will be used: _____
 Please attach a full description of the biological agent.

5.2 Will the biological agent be able to replicate in the host? ○ YES ○ NO

5.3 How will the biological agent be administered? _____

5.4 Please give the Health Care Facility where the clinical trial will be conducted: _____

5.5 Has human ethics approval been obtained? ○ YES, number: _____ ○ NO ○ PENDING

6.0 Animal Experiments

6.1 Will live animals be used? YES If no, please proceed to section 7.0

6.2 Name of animal species to be used _____ mouse _____

6.3 AUS protocol # _____ 2009-015, 2010-266 _____

6.4 Will any of the agents listed in section 4.0 be used in live animals YES, specify: S. typhimurium; E. coli; L. rhamnosus

6.5 Will the agent(s) be shed by the animal: ○ YES _____

7.0 Use of Animal species with Zoonotic Hazards

7.1 Will any animals with zoonotic hazards or their organs, tissues, lavages or other body fluids including blood be used (see list below)? No If no, please proceed to section 8.0

7.2 Will live animals be used? YES No

7.3 If yes, please specify the animal(s) used:

- ◆ Pound source dogs YES NO
- ◆ Pound source cats YES NO
- ◆ Cattle, sheep or goats YES, please specify species _____ NO
- ◆ Non-human primates YES, please specify species _____ NO
- ◆ Wild caught animals YES, please specify species & colony # _____ NO
- ◆ Birds YES, please specify species _____ NO
- ◆ Others (wild or domestic) YES, please specify _____ NO

7.4 If no live animals are used, please specify the source of the specimens:

8.0 Biological Toxins

8.1 Will toxins of biological origin be used? YES If no, please proceed to Section 9.0

8.2 If YES, please name the toxin(s): protective antigen factor, lethal factor

8.3 Please attach information, such as a Material Safety Data Sheet, for the toxin(s) used.

8.3 What is the LD₅₀ (specify species) of the toxin: unknown; estimated 100 µg per 20 g mouse

8.4 How much of the toxin is handled at one time*? ~ 5 µg of each

8.5 How much of the toxin is stored*? Up to 1 mg at a time (of each)

8.6 Will any biological toxins be used in live animals? NO

*For information on biosecurity requirements, please see:

http://www.uwo.ca/humanresources/docandform/docs/healthandsafety/biosafety/Biosecurity_Requirements.pdf

9.0 Insects

9.1 Do you use insects? NO If no, please proceed to Section 10.0

9.2 If YES, please give the name of the species. _____

9.3 What is the origin of the insect? _____

9.4 What is the life stage of the insect? _____

9.5 What is your intention? Initiate and maintain colony, give location: _____
 "One-time" use, give location: _____

9.6 Please describe the risk (if any) of escape and how this will be mitigated:

9.7 Do you use insects that require a permit from the CFIA permit? YES NO

If YES, Please attach the CFIA permit & describe any CFIA permit conditions:

10.0 Plants

10.1 Do you use plants? NO YES If no, please proceed to Section 11.0

10.2 If YES, please give the name of the species. _____

10.3 What is the origin of the plant? _____

10.4 What is the form of the plant (seed, seedling, plant, tree...)? _____

10.5 What is your intention? Grow and maintain a crop "One-time" use

10.6 Do you do any modifications to the plant? YES NO

If yes, please describe: _____

10.7 Please describe the risk (if any) of loss of the material from the lab and how this will be mitigated:

10.8 Is the CFIA permit attached? YES NO

If YES, Please attach the CFIA permit & describe any CFIA permit conditions:

11.0 Import Requirements

11.1 Will any of the above agents be imported? Yes

If no, please proceed to Section 12.0

11.2 Has an Import Permit been obtained from HC for human pathogens? YES

11.3 Has an import permit been obtained from CFIA for animal or plant pathogens? YES # A-2006-03171-4, 2007-00733-4, A-2006-00856-4,

11.4 Has the import permit been sent to No

12.0 Training Requirements for Personnel Named on Form

All personnel named on the above form who will be using any of the above named agents are required to attend the following training courses given by OHS:

- ◆ Biosafety
- ◆ Laboratory and Environmental/Waste Management Safety
- ◆ WHMIS (Western or equivalent)
- ◆ Employee Health and Safety Orientation

As the Principal Investigator, I have ensured that all of the personnel named on the form who will be using any of the biological agents in Sections 1.0 to 9.0 have been trained.

SIGNATURE _____  _____

13.0 Containment Levels

13.1 For the work described in sections 1.0 to 9.0, please indicate the highest HC or CFIA Containment Level required. 2

13.2 Has the facility been certified by OHS for this level of containment?
 YES, date of most recent biosafety inspection: 2010

13.3 Please indicate permit number (not applicable for first time applicants): BIO-UWO-0147

14.0 Procedures to be Followed

14.1 Please describe additional risk reduction measures will be taken beyond containment level 1, 2, 2+ or 3 measures, that are unique to this agent.

_____ None _____

14.2 Please outline what will be done if there is an exposure to the biological agents listed, such as a needlestick injury or an accidental splash:

i) Wash or decontaminate if possible. ii) take him/her to hospital

14.3 As the Principal Investigator, I will ensure that this project will follow the Western Biosafety Guidelines and Procedures Manual for Containment Level 1 & 2 Laboratories (and the Level 3 Facilities Manual for Level 3 projects). I will ensure that UWO faculty, staff and students working in my laboratory have an up-to-date Hazard Communication Form, found at <http://www.wph.uwo.ca/>

SIGNATURE: 

Date: November 9, 2011

15.0 Approvals

----- Original Message -----

Subject:Re: Containment Level request

Date:Mon, 08 Aug 2011 10:04:01 -0400

From:Permit-Permis <permitpermis@phac-aspc.gc.ca>

To:Jennifer Stanley <jstanle2@uwo.ca>

Good morning Jennifer Stanley,

Bacillus anthracis Sterne strain is a Risk Group 2 organism. Please note that a detailed Risk Assessment should be conducted to determine the Containment Level under which work must be performed as well as the operational practices to be followed. The Containment Level required for work with a particular agent is based on the manipulations generally associated with laboratory scale research and clinical procedures. The recommended Risk Group of the organism can be used as a starting point for determining the appropriate Containment Level, after which the following factors associated with laboratory operations should be examined: potential for aerosol generation, quantity, concentration, agent stability in the environment, type of work proposed, and use of recombinant organisms. Please refer to Chapter 2.3 of the *Laboratory Biosafety Guidelines, 3rd Edition (2004)* for more information.

Should you require additional information, please do not hesitate to contact our office directly at (613) 957-1779 or by email at permitpermis@phac-aspc.gc.ca

Regards,

Maria Lymberopoulos

MSDS'

Home > Laboratory Biosafety and Biosecurity > Biosafety Programs and Resources > Pathogen Safety Data Sheets and Risk Assessment > Pseudomonas spp. (excluding B. mallei, B. pseudomallei) - Material Safety Data Sheets (MSDS)

Pseudomonas spp. (excluding B. mallei, B. pseudomallei) - Material Safety Data Sheets (MSDS)

MATERIAL SAFETY DATA SHEET - INFECTIOUS SUBSTANCES

SECTION I - INFECTIOUS AGENT

NAME: *Pseudomonas* spp. (excluding *B. mallei*, *B. pseudomallei*)

SYNONYM OR CROSS REFERENCE: *P. aeruginosa*, *P. cepacia*

CHARACTERISTICS: Family Pseudomonadaceae, gram negative bacillus, aerobic, non-spore forming, some pigmented (pyocyanin, fluorescein), motile by polar flagella, variety of toxins produced

SECTION II - HEALTH HAZARD

PATHOGENICITY: Opportunistic pathogen, greatest risk of disease in the immunocompromised; most medical conditions arise from colonization of pathogen in the respiratory and urinary tracts or due to deep disseminated infections leading to pneumonia and bacteremia; chronic respiratory infections among cystic fibrosis patients; eye infections (especially in contact lens wearers); nosocomial infections causing severe and often fatal infections (case fatality in susceptible populations is 30%), increasingly associated with bacterial meningitis, abscesses, endocarditis

EPIDEMIOLOGY: Worldwide; increasing in frequency in recent years; commonly a nosocomial infection associated with contaminated instruments; 16% of nosocomial pneumonia, 12% of hospital acquired urinary-tract infections; rarely causes community acquired infections in immunocompetent patients

HOST RANGE: Humans, animals, plants

INFECTIOUS DOSE: Not known

MODE OF TRANSMISSION: Direct contact with contaminated water, aerosols or aspirations, by contact of mucous membranes with discharges from infected conjunctivae or upper respiratory tract of infected persons through contaminated objects (improperly sterilized medical equipment, contaminated IV fluids) or fingers;

INCUBATION PERIOD: Variable depending on infection; eye infection - 24 to 72 hours

COMMUNICABILITY: Can be transmitted during course of active infection

SECTION III - DISSEMINATION

RESERVOIR: Saprophyte - soil, water, decomposing matter; infected animals and humans; infected solutions - I.V., soaps, eye drops, humidifiers; organism thrives in moist conditions

ZOONOSIS: None

VECTORS: None

SECTION IV - VIABILITY

DRUG SUSCEPTIBILITY: Sensitive to extended spectrum penicillins, aminoglycosides, cephalosporins, fluoroquinolones, polymyxins and monobactams; aminoglycoside with a beta-lactam penicillin is the first line of treatment

DRUG RESISTANCE: Multidrug resistant strains are on the rise

SUSCEPTIBILITY TO DISINFECTANTS: Susceptible to many disinfectants - 1% sodium hypochlorite, 70% ethanol, 2% glutaraldehyde, formaldehyde; few reports of this bacteria growing in disinfectant solutions; alcohol-containing disinfectants recommended for resistant strains

PHYSICAL INACTIVATION: Inactivated by moist heat (121° C for at least 15 min) and dry heat (160-170° C for at least 1 hour)

SURVIVAL OUTSIDE HOST: Survives for several months in water with minimal nutrients

SECTION V - MEDICAL

SURVEILLANCE: Bacteriological identification of infection

FIRST AID/TREATMENT: Antibiotic therapy - aggressive treatment is necessary to avoid chronic infections; drainage of wounds; local application of antibiotic ointment or drops

IMMUNIZATION: None

PROPHYLAXIS: Antibiotic prophylaxis, not usually administered

SECTION VI - LABORATORY HAZARDS

LABORATORY-ACQUIRED INFECTIONS: No reported infections to date

SOURCES/SPECIMENS: Clinical specimens - respiratory secretions, wound exudates, blood, urine; environmental specimens - water, infected solutions (IV, disinfectants, soap)

PRIMARY HAZARDS: Accidental parenteral inoculation; direct contact of mucous membranes with infected materials; inhalation of infectious aerosols and ingestion also present a hazard

SPECIAL HAZARDS: None

SECTION VII - RECOMMENDED PRECAUTIONS

CONTAINMENT REQUIREMENTS: Biosafety level 2 practices, containment equipment and facilities for activities involving suspected or known infectious specimens and cultures

PROTECTIVE CLOTHING: Laboratory coat, gloves when direct contact with infectious materials is unavoidable

OTHER PRECAUTIONS: Good personal hygiene, frequent hand washing and the avoidance of rubbing eyes as a precautionary measure against eye infections

SECTION VIII - HANDLING INFORMATION

SPILLS: Allow aerosols to settle; wearing protective clothing, gently cover spill with paper towels and apply 1% sodium hypochlorite, starting at perimeter and working towards the centre; allow sufficient contact time before clean up and disposal (30 min)

DISPOSAL: Decontaminate before disposal - steam sterilization, chemical disinfection, incineration

STORAGE: In sealed containers that are appropriately labelled

SECTION IX - MISCELLANEOUS INFORMATION

Date prepared: March, 2001

Prepared by: Office of Laboratory Security, PHAC

Although the information, opinions and recommendations contained in this Material Safety Data Sheet are compiled from sources believed to be reliable, we accept no responsibility for the accuracy, sufficiency, or reliability or for any loss or injury resulting from the use of the information. Newly discovered hazards are frequent and this information may not be completely up to date.

Bacteria

ATCC® Number:

97™

[Order this Item](#)

Price:

\$205.00

Organism: *Pseudomonas aeruginosa* (Schroeter) Migula
 Designations: [NRRL B-247, NRRL B-800, RH 803]
 Depositor: AMC - Walter Reed Army Medical Center
Biosafety Level: 2
 Shipped: freeze-dried
 Growth Conditions: ATCC medium3: Nutrient agar or nutrient broth
Temperature: 37.0°C
 Permits/Forms: In addition to the MTA mentioned above, other ATCC and/or regulatory permits may be required for the transfer of this ATCC material. Anyone purchasing ATCC material is ultimately responsible for obtaining the permits. Please click here for information regarding the specific requirements for shipment to your location.

Permit to import human pathogen(s)

Permis d'importation d'agent(s) anthropopathogène(s)

Under the authority of the Human Pathogens Importation Regulations.

Sous le régime du Règlement sur l'importation des agents anthropopathogènes.

Importer-Name, address and postal code - Importateur-Nom, adresse et code postal	Facsimile-Télécopieur	Telephone no. - No. de téléphone
University of Western Ontario Siebens-Drake Research Institute, Rm. 119 1400 Western Rd., London, ON N6G 2V4 Attn.: Dr. Kim Sung O	(519) 661-2046	(519) 850-2961

Supplier-Name and address - Fournisseur-Nom et adresse	Name(s) of Port(s) of Entry- To Clear Customs at Port(s) of entry Nom(s) de(s) point(s) d'entrée -Dédouanement au(x) point(s) d'entrée
Yale University Medicine & Microbial Pathogenesis 333 Cedar Street, New Haven, CT USA	Various ports

Description of Pathogen(s)-For the importation of- Description de(s) agent(s) anthropopathogène(s)-Pour l'importation de
Pseudomonas aeruginosa* strains.

*Pathogen(s) indicated on this permit also require an accompanying valid CFIA permit for importation -
 *Les agents anthropopathogènes indiqués sur ce permis doivent aussi être accompagnés d'un permis d'importation de l'ACIA.

On the following terms and conditions as marked:-Selon les conditions indiquées:

- | | | |
|---|-------------------------------------|---|
| 1. Work involving any of the imported material shall be limited to <i>in vitro</i> laboratory studies. | <input checked="" type="checkbox"/> | Les travaux auxquels la matière importée est destinée doivent se limiter à des études de laboratoire <i>in vitro</i> . |
| 2. Domestic animals, including poultry, cattle, sheep, swine and horses, shall not be directly or indirectly exposed to infection by any of the imported material. | <input checked="" type="checkbox"/> | Les animaux domestiques, y compris les volailles, bovins, ovins, porcins et chevaux, ne doivent pas être exposés, directement ou indirectement, à l'infection par la matière importée. |
| 3. All animals exposed to infection by any of the imported material shall be so exposed and held only in isolated insect-and rodent-proof facilities. | <input type="checkbox"/> | Les animaux exposés à l'infection par la matière importée doivent y être exposés et être gardés uniquement dans des installations isolées à l'abri des insectes et des rongeurs. |
| 4. All equipment, animal pens, cages, bedding, waste and other articles under the importer's control, that come in direct or indirect contact with any of the imported material, shall be sterilized by autoclaving or incinerated. | <input checked="" type="checkbox"/> | L'équipement, les enclos pour animaux, les cages, les litières, les déchets et tout autre article sous la responsabilité de l'importateur qui viennent en contact direct ou indirect avec la matière importée doivent être stérilisés par autoclavage ou incinérés. |
| 5. Packaging materials, containers and all unused portions of the imported material shall be sterilized by autoclaving or incinerated. | <input type="checkbox"/> | Le matériel d'emballage, les récipients et toute partie inutilisée de la matière importée doivent être stérilisés par autoclavage ou incinérés. |
| 6. No work on the imported material shall be done, except work conducted or directed by the importer in the facilities described in the application for this permit. NO HUMAN PATHOGEN BELONGING TO RISK GROUP 3 OR 4 MAY BE REMOVED TO ANOTHER LOCATION, OR TRANSFERRED INTO THE POSSESSION OF A PERSON OTHER THAN THE IMPORTER, WITHOUT THE PERMISSION OF THE DIRECTOR. | <input checked="" type="checkbox"/> | La matière importée ne peut servir qu'aux travaux effectués ou dirigés par l'importateur dans les installations décrites dans la demande de permis. AUCUNE AGENT ANTHROPOPATHOGÈNE DU GROUPE DE RISQUE 3 OU 4 NE PEUT ÊTRE TRANSPORTÉ, SANS LA PERMISSION DU DIRECTEUR, VERS UN AUTRE LIEU OU ÊTRE MIS EN LA POSSESSION D'UNE AUTRE PERSONNE QUE L'IMPORTATEUR. |
| 7. On completion of the importer's work involving the imported human pathogen, the pathogen and all its derivatives shall be destroyed. | <input type="checkbox"/> | Au terme des travaux de l'importateur auxquels a servi l'agent anthropopathogène importé, celui-ci et tous ses dérivés doivent être détruits. |
| 8. Primary isolation, identification and/or manipulation may be done in level 2 containment (physical requirements) using containment level 3 operational requirements. | <input type="checkbox"/> | On peut accomplir l'isolation, l'identification primaire, et/ou la manipulation au niveau de confinement 2 (exigences physiques) en utilisant les exigences opérationnelles de niveau de confinement 3. |
| 9. NO IMPORTED MATERIAL MAY BE REMOVED TO ANOTHER LOCATION, OR TRANSFERRED INTO THE POSSESSION OF A PERSON OTHER THAN THE IMPORTER, WITHOUT THE PERMISSION OF THE DIRECTOR. | <input type="checkbox"/> | AUCUNE MATIÈRE IMPORTÉE NE PEUT ÊTRE TRANSPORTÉE, SANS LA PERMISSION DU DIRECTEUR, VERS UN AUTRE LIEU OU ÊTRE MISE EN LA POSSESSION D'UNE AUTRE PERSONNE QUE L'IMPORTATEUR. |
| 10. The Director must approve all new work with the imported material involving construction of recombinants that requires an increase of containment from level 2. | <input type="checkbox"/> | Tous nouveaux travaux de manipulation génétique (recombiné) avec la matière importée qui demandera que le niveau 2 de confinement soit augmenté exigera l'approbation du Directeur. |
| 11. No culturing of Risk Group 3 or 4 pathogens shall be done. | <input type="checkbox"/> | Aucune culture d'agent anthropopathogène du Groupe de risque 3 ou 4 ne sera entreprise. |

12. This permit is valid only for: a) a single entry into Canada or
 Le présent permis n'est valide que pour: une seule entrée au Canada ou

b) importations at intervals of during the period beginning on and ending on
 les importations effectuées à intervalles de au cours de la période commençant le et se terminant le

The Office of Biohazard Containment and Safety (BCS) of the Canadian Food Inspection Agency (CFIA) only issues import permits for microorganisms that are pathogenic to animals, or parts of microorganisms that are pathogenic to animals. As the products listed above are not considered pathogenic to animals, the Office of BCS does not have any regulatory requirements for their importation.

Please note that other legislation may apply. You may wish to contact the Public Health Agency of Canada's (PHAC) Office of Laboratory Security at (613) 957-1779.

Note: Microorganisms pathogenic to animals and veterinary biologics require an import permit from the CFIA.

Sincerely,

Cinthia Labrie
 Head, Animal Pathogen Importation Program
 Office of Biohazard Containment & Safety

Subject:Re: Lactobacillus question - containment (KIM)

Date:Thu, 13 Mar 2008 14:17:28 -0400

From:Jean-Nicolas Gagnon <jean-nicolas_gagnon@phac-aspc.gc.ca>

To:Jennifer Stanley <jstanle2@uwo.ca>

Hello Jennifer:

L. rhamnosus is a RG1

L. ractis: is this a typo for L. lactis (I had 0 hits for L. ractis even when doing a Google search)? If so, L. lactis is a RG1

I hope this helps.

Cheers!

Jean-Nic

Cell Biology

ATCC® Number: **TIB-71™** Order this Item Price: **\$279.00**

Designations: **RAW 264.7**

Depositors: WC Raschke

Biosafety Level: 2

Shipped: frozen

Medium & Serum: [See Propagation](#)

Growth Properties: adherent

Organism: *Mus musculus* (mouse)
monocyte/macrophage

Morphology:

Tissue: ascites

Strain: BALB/c

Source: **Disease:** Abelson murine leukemia virus-induced tumor
Cell Type: macrophage; Abelson murine leukemia virus transformed

Cellular Products: lysozyme [1207]

In addition to the [MTA](#) mentioned above, other [ATCC and/or regulatory permits](#) may be required for the transfer of this ATCC material. Anyone purchasing ATCC material is ultimately responsible for obtaining the permits. Please [click here](#) for information regarding the specific requirements for shipment to your location.

Permits/Forms:

Applications: Biological response [92560]
transfection host ([Roche FuGENE® Transfection Reagents](#))

Receptors: complement (C3) [1207]

Antigen Expression: H-2d

Age: adult

Gender: male

Comments:

This line was established from a tumor induced by Abelson murine leukemia virus. They are negative for surface immunoglobulin (sIg-), Ia (Ia-) and Thy-1.2 (Thy-1.2) This line does not secrete detectable virus particles and is negative in the XC plaque formation assay. The cells will pinocytose neutral red and will phagocytose latex beads and zymosan. They are capable of antibody dependent lysis of sheep erythrocytes and tumor cell targets. LPS or PPD treatment for 2 days stimulates lysis of erythrocytes but not tumor cell targets. Data communicated in Feb. 2007 by Dr Janet W. Hartley, indicates the expression of infectious ecotropic MuLV closely related, if not identical, to the Moloney MuLV helper virus used in the original virus inoculum. The cells also express polytropic MuLV, unsurprisingly based on the mouse passage history of the virus stocks [PubMed 18177500].

Cell Biology

ATCC® Number: **CCL-61™** Order this Item Price: **\$279.00**

Designations: **CHO-K1**
 Depositors: TT Puck
Biosafety Level: 1
 Shipped: frozen
 Medium & Serum: [See Propagation](#)
 Growth Properties: adherent
 Organism: Cricetulus griseus (hamster, Chinese)
 epithelial-like

Morphology:

Source: **Organ:** ovary

In addition to the [MTA](#) mentioned above, other [ATCC and/or regulatory permits](#) may be required for the transfer of this ATCC material. Anyone purchasing ATCC material is ultimately responsible for obtaining the permits. Please [click here](#) for information regarding the specific requirements for shipment to your location.

Permits/Forms:

Isolation: **Isolation date:** 1957

Applications: transfection host ([Nucleofection technology from Lonza Roche FuGENE® Transfection Reagents](#))

Virus Resistance: poliovirus 2; modoc virus; Button Willow virus

Cytogenetic Analysis: Chromosome Frequency Distribution 50 Cells: 2n = 22.
Stemline number is hypodiploid.

Gender: female

Comments: The CHO-K1 cell line was derived as a subclone from the parental CHO cell line initiated from a biopsy of an ovary of an adult Chinese hamster by T. T. Puck in 1957. [22224]

The cells require proline in the medium for growth. [25976]

Propagation: **ATCC complete growth medium:** The base medium for this cell line is ATCC-formulated F-12K Medium, Catalog No. 30-2004. To make the complete growth medium, add the following components to the base medium: fetal bovine serum to a final concentration of 10%.

Temperature: 37.0°C

Cell Biology

ATCC® Number: **CCL-1™** Order this Item Price: **\$279.00**

Designations: NCTC clone 929 [L cell, **L-929**, derivative of Strain L]

Depositors: WR Earle

Biosafety Level: 1

Shipped: frozen

Medium & Serum: [See Propagation](#)

Growth Properties: adherent

Organism: *Mus musculus* (mouse)

fibroblast

Morphology:

Source:

Tissue: subcutaneous connective tissue; areolar and adipose
Strain: C3H/An

Permits/Forms:

In addition to the [MTA](#) mentioned above, other [ATCC and/or regulatory permits](#) may be required for the transfer of this ATCC material. Anyone purchasing ATCC material is ultimately responsible for obtaining the permits. Please [click here](#) for information regarding the specific requirements for shipment to your location.

Isolation:

Isolation date: March, 1948

Applications:

testing [[92346](#)] [[92380](#)] [[92382](#)] [[92389](#)] [[92404](#)]
toxicity testing [[21469](#)] [[21470](#)] [[21606](#)]
transfection host ([Nucleofection technology from Lonza Roche FuGENE® Transfection Reagents](#))

Virus Resistance: poliovirus 1, 2, 3; coxsackievirus B5; polyomavirus

Tumorigenic: Yes

Antigen Expression: H-2k

Cytogenetic Analysis:

modal chromosome number = 66; range = 65 to 68. There were approximately 20 to 30 marker chromosomes present in each metaphase spread. A high percentage of those markers were common to most analyzed cells. A long metacentric chromosome with secondary constriction was noted in 77/100 cells.

Age: 100 days

Gender: male

MATERIAL SAFETY DATA SHEET
Anthrax Products

Ingredients

Anthrax proteins LF, PA and EF are produced by plasmids licensed from the NIH. Plasmids are introduced into a non-sporulating avirulent strain of *Bacillus anthracis* which lacks both of the wild type plasmids, pX01 and pX02. The host makes none of the anthrax toxin components and does not produce a polyglutamate capsule. Thus, the anthrax toxin components produced at List Biological Laboratories, Inc. are single, pure proteins lacking all other virulence factors.

Physical Properties

These products are provided as white lyophilized powders.

Fire and Explosion Hazard

Contents of the vials are simple salts, sugars and protein powder. These materials do not present a fire or explosion hazard.

Health and Toxicity Hazard

Individually, each protein is non-toxic and presents no hazard during normal laboratory use.

Spill or Leak Procedures

Wear protective equipment such as gloves, lab coat, safety glasses and a particle mask when cleaning up spills. These products may be destroyed by autoclaving or treating with 10% Clorox bleach ($\geq 0.05\%$ hypochlorite).

Special Protection Information

These products are to be used by skilled personnel only in laboratory settings. Good laboratory practices should be employed at all times. Wear safety glasses, a lab coat and gloves. Avoid inadvertent injection when handling with hypodermic needles. Do not mouth pipette. Avoid inhalation of the products. Wear a particle mask when working with dry protein powder.

Description of Pathogen(s)-For the importation of- Description de(s) agent(s) anthropopathogène(s)-Pour l'importation de

Protective Antigen and Lethal Factor recombinants from Bacillus anthracis*

*Pathogen(s) indicated on this permit also require an accompanying valid CFIA permit for importation -

*Les agents anthropopathogènes indiqués sur ce permis doivent aussi être accompagnés d'un permis d'importation de l'ACIA.

On the following terms and conditions as marked:-Selon les conditions indiquées:

- | | | |
|---|-------------------------------------|---|
| 1. Work involving any of the imported material shall be limited to <i>in vitro</i> laboratory studies. | <input checked="" type="checkbox"/> | Les travaux auxquels la matière importée est destinée doivent se limiter à des études de laboratoire <i>in vitro</i> . |
| 2. Domestic animals, including poultry, cattle, sheep, swine and horses, shall not be directly or indirectly exposed to infection by any of the imported material. | <input checked="" type="checkbox"/> | Les animaux domestiques, y compris les volailles, bovins, ovins, porcins et chevaux, ne doivent pas être exposés, directement ou indirectement, à l'infection par la matière importée. |
| 3. All animals exposed to infection by any of the imported material shall be so exposed and held only in isolated insect-and rodent-proof facilities. | <input type="checkbox"/> | Les animaux exposés à l'infection par la matière importée doivent y être exposés et être gardés uniquement dans des installations isolées à l'abri des insectes et des rongeurs. |
| 4. All equipment, animal pens, cages, bedding, waste and other articles under the importer's control, that come in direct or indirect contact with any of the imported material, shall be sterilized by autoclaving or incinerated. | <input checked="" type="checkbox"/> | L'équipement, les enclos pour animaux, les cages, les litières, les déchets et tout autre article sous la responsabilité de l'importateur qui viennent en contact direct ou indirect avec la matière importée doivent être stérilisés par autoclavage ou incinérés. |
| 5. Packaging materials, containers and all unused portions of the imported material shall be sterilized by autoclaving or incinerated. | <input type="checkbox"/> | Le matériel d'emballage, les récipients et toute partie inutilisée de la matière importée doivent être stérilisés par autoclavage ou incinérés. |
| 6. No work on the imported material shall be done, except work conducted or directed by the importer in the facilities described in the application for this permit. NO HUMAN PATHOGEN BELONGING TO RISK GROUP 3 OR 4 MAY BE REMOVED TO ANOTHER LOCATION, OR TRANSFERRED INTO THE POSSESSION OF A PERSON OTHER THAN THE IMPORTER, WITHOUT THE PERMISSION OF THE DIRECTOR. | <input checked="" type="checkbox"/> | La matière importée ne peut servir qu'aux travaux effectués ou dirigés par l'importateur dans les installations décrites dans la demande de permis. AUCUNE AGENT ANTHROPOPATHOGENE DU GROUPE DE RISQUE 3 OU 4 NE PEUT ÊTRE TRANSPORTÉ, SANS LA PERMISSION DU DIRECTEUR, VERS UN AUTRE LIEU OU ÊTRE MIS EN LA POSSESSION D'UNE AUTRE PERSONNE QUE L'IMPORTATEUR. |
| 7. On completion of the importer's work involving the imported human pathogen, the pathogen and all its derivatives shall be destroyed. | <input checked="" type="checkbox"/> | Au terme des travaux de l'importateur auxquels a servi l'agent anthropopathogène importé, celui-ci et tous ses dérivés doivent être détruits. |
| 8. Primary isolation, identification and/or manipulation may be done in level 2 containment (physical requirements) using containment level 3 operational requirements. No culturing of Risk Group 3 pathogens shall be done. | <input type="checkbox"/> | On peut accomplir l'isolation, l'identification primaire, et/ou la manipulation au niveau de confinement 2 (exigences physiques) en utilisant les exigences opérationnelles de niveau de confinement 3. Aucune culture d'agent anthropopathogène du Groupe de risque 3 ne sera entreprise. |
| 9. NO IMPORTED MATERIAL MAY BE REMOVED TO ANOTHER LOCATION, OR TRANSFERRED INTO THE POSSESSION OF A PERSON OTHER THAN THE IMPORTER, WITHOUT THE PERMISSION OF THE DIRECTOR. | <input type="checkbox"/> | AUCUNE MATIÈRE IMPORTÉE NE PEUT ÊTRE TRANSPORTÉE, SANS LA PERMISSION DU DIRECTEUR, VERS UN AUTRE LIEU OU ÊTRE MISE EN LA POSSESSION D'UNE AUTRE PERSONNE QUE L'IMPORTATEUR. |
| 10. The Director must approve all new work with the imported material involving construction of recombinants that requires an increase of containment from level 2. | <input checked="" type="checkbox"/> | Tous nouveaux travaux de manipulation génétique (recombiné) avec la matière importée qui demandera que le niveau 2 de confinement soit augmenté exigera l'approbation du Directeur. |

Note: Transporting and otherwise dealing with imported material are subject to federal, provincial and municipal laws (if any), to the extent that, those laws apply in respect of that material.

Remarque: Les opérations relatives à la matière importée, y compris le transport, sont assujetties aux lois fédérales, provinciales et aux règlements municipaux applicables.

TOXIN USE RISK ASSESSMENT

Name of Toxin:	protective antigen factor
Proposed Use Dose:	5 µg
Proposed Storage Dose:	1000 µg
LD₅₀ (species):	5000 µg

Calculation:	
5000 µg/kg	x 50 kg/person
Dose per person based on LD ₅₀ in µg = 250000	
LD₅₀ per person with safety factor of 10 based on LD₅₀ in µg = 25000	

Comments/Recommendations:
