

Please explain the biological agents and/or biohazardous substances used and how they will be stored, used and disposed of. Projects without this description will not be reviewed.

Biological Agent: Human Cancer Cell Lines (list attached)

Usage – live cells maintained in cell culture incubator, and handled in laminar flow BSC

- Cells may also be inoculated into mice, which will be undertaken in a BSC in a dedicated Level II animal-handling facility in the VRL vivarium.

Storage - Stored in freezer bank (-80 and -150 freezers)

Disposal – liquids that contain cells are bleached and flushed down drain

- Plasticware that has been in contact with cells is disposed into biohazard waste boxes (lined with a yellow bag) and disposed by licensed waste carrier, SteriCycle (autoclaved and/or incinerated before disposing in land-fill)

Biological Agent: Lentivirus (pLenti-III-HA)

Usage – virus handled in Level II+ biohazard facility, in a laminar flow BSC, and maintained in a dedicated cell culture incubator. These are maintained in a locked, limited-access cell culture room. Users must wear dedicated PPE, and all material that contacts the virus must be thoroughly decontaminated prior to disposal or transfer to another facility.

The virus is purchased from Applied Biological Materials Inc. This company is in Canada, and an import permit is not required to purchase the virus. It is a non-replicative virus, and is not capable of being propagated in the laboratory. Therefore, it will not be propagated in the laboratory. The virus will be used to transfect an h-TERT-expressing plasmid into cells. This only partially transforms cells. If the cells were implanted into animals, the cells would not be capable of forming a tumour. The non-replicative virus would not replicate in the animal. There is no plan to inject lentivirus –infected cells into animals.

The virus is provided at a concentration of 1.85×10^9 particles per ml. It is diluted to 1 ml of 10^8 /ml prior to use, in cell culture medium, and is added in a volume of 1 ml or less to 1 ml of cultured cells in a well of a 24-well plate. There may be up to 9 wells infected at a time.

It does not appear from the map provided that this is a self-inactivating (SIN) virus. However, it is not capable of replication without assistance. It will be infected into primary prostate epithelial cells.

The investigator will not be attempting to propagate the virus in any manner.

Storage – virus kept in culture medium in -80 freezer

Disposal – virus in liquid is thoroughly bleached prior to flushing down a drain

- Plasticware that has contacted virus is thoroughly bleached, then autoclaved immediately prior to disposal in a biohazardous waste container.
- The operational procedures described above are in compliance with the university guidelines described in the document located at:

http://www.uwo.ca/humanresources/docandform/docs/healthandsafety/biosafety/viral_vector_policy.pdf

Biological Agent: Adenovirus

Usage – virus handled in Level II biohazard facility, in a laminar flow BSC, and maintained in a dedicated cell culture incubator. Users must wear PPE, and all material that contacts the virus must be thoroughly decontaminated prior to disposal or transfer to another facility. This virus is already in the lab, and was obtained from a laboratory in the U. S. through the appropriate channels, using a Health Canada import permit.

Storage – virus kept in culture medium in -80 freezer

Disposal – virus in liquid is thoroughly bleached prior to flushing down a drain

- Plasticware that has contacted virus is bleached, then autoclaved immediately prior to disposal in a biohazardous waste container.
- There is no plan to inject adenovirus into animals.
- The operational procedures described above are in compliance with the university guidelines described in the document located at:

http://www.uwo.ca/humanresources/docandform/docs/healthandsafety/biosafety/viral_vector_policy.pdf

Possible Biological Agent: Mycoplasma

Many cultured cell lines carry mycoplasma, and so it is assumed that any cell line could be carrying this bacteria. The methodology described above for handling of cultured cell lines provides the appropriate methodology for usage, storage, and disposal of this organism should a cell line happen to be contaminated.

The investigator does not intend to import, propagate, or work with any other virus, plasmid, or bacteria.

Please include a one page research summary or teaching protocol.

PLEASE NOTE THAT THE FOLLOWING INFORMATION IS STRICTLY CONFIDENTIAL

The incidence of prostate cancer could be greatly reduced with a convenient and safe preventive intervention. The overall goal of this research program is to generate a dietary supplement that will prevent the development of prostate cancer. Our laboratory has demonstrated *in vivo* and *in vitro* that isolates from cranberry extracts, enriched in flavonoids and other polyphenols, kill cancer cells. In particular, treatment with cranberry extracts inhibited the growth of human prostate tumour explants in mice. This specific project will determine if cranberry extracts can prevent the early steps of oncogenic progression of non-cancerous human prostate cells. Normal, primary prostate cells, immortalized by a single genetic change [transfection with human telomerase catalytic subunit (hTERT) to mimic the obligatory constitutive telomerase expression found in cancer cells] can spontaneously undergo “epithelial to mesenchymal transition” (EMT), an important step in malignant transformation. As a collaborative team of scientists, a pharmacologist, and a urology surgeon, we will establish this model system and study the effect of cranberry on the process of malignant progression. We **hypothesize** that cranberry extracts Fr6 and PACs can prevent EMT of prostate epithelial cells and inhibit malignant activities of cells that acquire the mesenchymal phenotype.

Objectives and Methods: (1) *To generate a stock of flavonoid-rich cranberry extracts*, using established chromatographic procedures. (2) *To generate primary and immortalized cultures of prostate epithelial cells*. Normal prostate cells, propagated from surgical specimens, will be immortalized by transfection with hTERT and cultured. (3) *To determine if the presence of cranberry extracts can prevent malignant progression (EMT) of primary prostate cultures*. Markers of mesenchymal cells will be assayed (increased p16 and N-cadherin, decreased E-cadherin). (4) *To determine if cranberry extracts can inhibit malignant properties of transformed prostate cells*, namely migration and invasion of the mesenchymal cells generated above in non-cranberry-treated cultures.

Metformin is currently being investigated for its potential antineoplastic activity. This research has been spurred in part by the observation that patients receiving metformin for control of diabetes have lower rates of malignancy than diabetic patients on insulin or sulfonylureas. Many researchers have also observed growth inhibition *in vitro* in many cell lines with metformin. The anti-neoplastic mechanism of action of metformin is not well understood. Putative mechanisms include changes in insulin and insulin-like receptor signaling, indirect inhibition of mammalian target of rapamycin, inhibition of her-2 neu signaling and antiangiogenic effects. The principal target of metformin is likely to be adenosine monophosphate kinase, a regulator of cell metabolism. We therefore seek to study the potential mechanism of anti-neoplastic action of metformin, looking for molecular predictors of activity *in vitro*. We will test our hypothesis using the cell lines A549b and SK-MEL-5 in which we see the most promising anti-tumour activity.

1.0 Microorganisms

1.1 Does your work involve the use of biological agents? YES NO
 (non-pathogenic and pathogenic biological agents including but not limited to bacteria and other microorganisms, viruses, prions, parasites or pathogens of plant or animal origin)? If no, please proceed to Section 2.0

Do you use microorganisms that require a permit from the CFIA? YES NO

If YES, please give the name of the species. Lentivirus, adenovirus

What is the origin of the microorganism(s)? obtained from commercial sources

Please describe the risk (if any) of escape and how this will be mitigated: If handled extremely carelessly, a virus particles could become airborne. This risk is mitigated by handling inside of a laminar flow BSC.

Liquids and plasticware that contact virus particles are thoroughly bleached and/or washed with 70% ethanol, and then autoclaved to prevent any live virus from becoming airborne or able to spread by contact.

Please attach the CFIA permit.

Please describe any CFIA permit conditions:

The lentivirus was obtained from a Canadian supplier, and therefore no CFIA permit was required to obtain it. This virus is also designed to be non-replicative in human cells, and therefore is not a pathogen unless genetically engineered to do so. A copy of the permit to import adenovirus is enclosed, as well as a copy of the Level II certification.

1.2 Please complete the table below:

Name of Biological Agent(s)* (Be specific)	Is it known to be a human pathogen? YES/NO	Is it known to be an animal pathogen? YES/NO	Is it known to be a zoonotic agent? YES/NO	Maximum quantity to be cultured at one time? (in Litres)	Source/ Supplier	PHAC or CFIA Containment Level
Lentivirus	<input checked="" type="radio"/> Yes <input type="radio"/> No	<input checked="" type="radio"/> Yes <input type="radio"/> No	<input type="radio"/> Yes <input checked="" type="radio"/> No	0.001	Applied Biological Materials Inc	<input type="radio"/> 1 <input type="radio"/> 2 <input checked="" type="radio"/> 2+ <input type="radio"/> 3
Adenovirus	<input checked="" type="radio"/> Yes <input type="radio"/> No	<input checked="" type="radio"/> Yes <input type="radio"/> No	<input type="radio"/> Yes <input checked="" type="radio"/> No	0.010	Univ. of California	<input type="radio"/> 1 <input checked="" type="radio"/> 2 <input type="radio"/> 2+ <input type="radio"/> 3
	<input type="radio"/> Yes <input type="radio"/> No	<input type="radio"/> Yes <input type="radio"/> No	<input type="radio"/> Yes <input type="radio"/> No			<input type="radio"/> 1 <input type="radio"/> 2 <input type="radio"/> 2+ <input type="radio"/> 3
	<input type="radio"/> Yes <input type="radio"/> No	<input type="radio"/> Yes <input type="radio"/> No	<input type="radio"/> Yes <input type="radio"/> No			<input type="radio"/> 1 <input type="radio"/> 2 <input type="radio"/> 2+ <input type="radio"/> 3

*Please attach a Material Safety Data Sheet or equivalent from the supplier.

2.0 Cell Culture

2.1 Does your work involve the use of cell cultures? YES NO

If no, please proceed to Section 3.0

2.2 Please indicate the type of primary cells (i.e. derived from fresh tissue) that will be grown in culture:

Cell Type	Is this cell type used in your work?	Source of Primary Cell Culture Tissue	AUS Protocol Number
Human	<input checked="" type="radio"/> Yes <input type="radio"/> No	prostate	Not applicable
Rodent	<input type="radio"/> Yes <input checked="" type="radio"/> No		
Non-human primate	<input type="radio"/> Yes <input checked="" type="radio"/> No		
Other (specify)	<input type="radio"/> Yes <input checked="" type="radio"/> No		

2.3 Please indicate the type of established cells that will be grown in culture in:

Cell Type	Is this cell type used in your work?	Specific cell line(s)*	Containment Level of each cell line	Supplier / Source of cell line(s)
Human	<input type="radio"/> Yes <input type="radio"/> No			
Rodent	<input type="radio"/> Yes <input type="radio"/> No			
Non-human primate	<input type="radio"/> Yes <input type="radio"/> No			
Other (specify)	<input type="radio"/> Yes <input type="radio"/> No			

*Please attach a Material Safety Data Sheet or equivalent from the supplier. (For more information, see www.atcc.org)

The information from ATCC does not provide any information that indicates whether the cell lines are considered level I, II or otherwise. ATCC will also not provide any information as to whether the cell lines contain mycoplasma, or if they express virus particles. For these reasons, all cell lines are handled under the assumption that they are Level II and may contain mycoplasma and may express virus particles. The ATCC information sheets do not contain any information that suggests how the cell lines should be handled safely, or what to do should any accidentally be ingested or exposed to skin or eyes. Because the ATCC information sheets are thus considered to be non-informative for the purposes of safe handling, and because this laboratory handles at least 58 different cell lines, the ATCC information sheets are not attached to this form.

2.4 For above named cell types(s) indicate PHAC or CFIA containment level required 1 2 2+ 3

3.0 Use of Human Source Materials

3.1 Does your work involve the use of human source materials? YES NO

If no, please proceed to Section 4.0

It is not known whether a primary prostate epithelial cell line constitutes a "tissue" for the purpose of this document. In the event that it is interpreted as such, the investigator has completed the table below. A description of the process used in these experiments is provided on pages 2 and 3. The cell line is not infected with an infectious agent. It will be infected with a non-replicative lentivirus, which is considered non-infectious.

3.2 Indicate in the table below the Human Source Material to be used.

Human Source Material	Source/Supplier /Company Name	Is Human Source Material Infected With An Infectious Agent? YES/UNKNOWN	Name of Infectious Agent (If applicable)	PHAC or CFIA Containment Level (Select one)
Human Blood (whole) or other Body Fluid		<input type="radio"/> Yes <input type="radio"/> Unknown		<input type="radio"/> 1 <input type="radio"/> 2 <input type="radio"/> 2+ <input type="radio"/> 3
Human Blood (fraction) or other Body Fluid		<input type="radio"/> Yes <input type="radio"/> Unknown		<input type="radio"/> 1 <input type="radio"/> 2 <input type="radio"/> 2+ <input type="radio"/> 3
Human Organs or Tissues (unpreserved) – normal prostate epithelial cell line	Sciencell Research Laboratories	<input type="radio"/> Yes <input checked="" type="radio"/> Unknown	Not applicable	<input type="radio"/> 1 <input type="radio"/> 2 <input checked="" type="radio"/> 2+ <input type="radio"/> 3
Human Organs or Tissues (preserved)		Not Applicable		Not Applicable

4.0 Genetically Modified Organisms and Cell lines

4.1 Will genetic modifications be made to the microorganisms, biological agents, or cells described in Sections 1.0 and 2.0? YES NO If no, please proceed to Section 5.0

4.2 Will genetic modification(s) involving plasmids be done? YES, complete table below NO

4.6 Will virus be infectious to humans or animals? YES NO
The adenovirus may infect humans if not handled correctly. It usually causes symptoms similar to that of a cold, and will not cause cancer in humans. It can cause cancer in rodents. This virus or cells containing the virus will not be introduced into humans or animals.

4.7 Will this be expected to increase the containment level required? YES NO
The containment levels are Level 2 for adenovirus, and Level 2+ for lentivirus. These will be maintained for all experiments.

5.0 Human Gene Therapy Trials

5.1 Will human clinical trials be conducted involving a biological agent? YES NO
(including but not limited to microorganisms, viruses, prions, parasites or pathogens of plant or animal origin)
If no, please proceed to Section 6.0

5.2 If YES, please specify which biological agent will be used: _____
Please attach a full description of the biological agent.

5.2 Will the biological agent be able to replicate in the host? YES NO

5.3 How will the biological agent be administered? _____

5.4 Please give the Health Care Facility where the clinical trial will be conducted: _____

5.5 Has human ethics approval been obtained? YES, number: _____ NO PENDING

6.0 Animal Experiments

6.1 Will live animals be used? YES NO If no, please proceed to section 7.0
The cells that are to be used in mice are not infected with plasmid or virus. This is not described in the mouse protocol, because it is not being done. The mouse protocol describes the implantation of tumour cell lines into mice. It does not describe any experiments that involve virus-infected or plasmid-transduced cells.

6.2 Name of animal species to be used _____ nude mice _____

6.3 AUS protocol # _____ 2008-090 _____

6.4 Will any of the agents listed in section 4.0 be used in live animals YES, specify: _____ NO
There will be no experiments in animals using virus, plasmids, or cells that have been infected/transduced with virus or plasmids.

6.5 Will the agent(s) be shed by the animal: YES NO, please justify:
_____The agent will not be shed because it will not be administered to the animals.

7.0 Use of Animal species with Zoonotic Hazards

7.1 Will any animals with zoonotic hazards or their organs, tissues, lavages or other body fluids including blood be used (see list below)? YES No If no, please proceed to section 8.0

7.2 Will live animals be used? YES No

7.3 If yes, please specify the animal(s) used:
◆ Pound source dogs YES NO

10.5 What is your intention? Grow and maintain a crop "One-time" use

10.6 Do you do any modifications to the plant? YES NO

If yes, please describe: _____

10.7 Please describe the risk (if any) of loss of the material from the lab and how this will be mitigated:

10.8 Is the CFIA permit attached? YES NO

If YES, Please attach the CFIA permit & describe any CFIA permit conditions:

11.0 Import Requirements

11.1 Will any of the above agents be imported? YES, please give country of origin _____ NO

If no, please proceed to Section 12.0

The adenovirus has already been imported. A Health Canada import permit was obtained at the time, and has now expired. It is not expected that more virus will be imported within the duration of this permit. The lentivirus is obtained from a Canadian company, for which an import permit is not required.

11.2 Has an Import Permit been obtained from HC for human pathogens? YES NO

An import permit was obtained previously for the import of adenovirus. The permit numbers are P-09559 and P-07009.

11.3 Has an import permit been obtained from CFIA for animal or plant pathogens? YES NO

Health Canada declared that a single permit was sufficient for the import of adenovirus. Therefore, a CFIA permit was not obtained.

11.4 Has the import permit been sent to OHS? YES, please provide permit # _____ NO

12.0 Training Requirements for Personnel Named on Form

All personnel named on the above form who will be using any of the above named agents are required to attend the following training courses given by OHS:

- ◆ Biosafety
- ◆ Laboratory and Environmental/Waste Management Safety
- ◆ WHMIS (Western or equivalent)
- ◆ Employee Health and Safety Orientation

As the Principal Investigator, I have ensured that all of the personnel named on the form who will be using any of the biological agents in Sections 1.0 to 9.0 have been trained.

SIGNATURE _____

Signature

13.0 Containment Levels

13.1 For the work described in sections 1.0 to 9.0, please indicate the highest HC or CFIA Containment Level required.

1 2 2+ 3

13.2 Has the facility been certified by OHS for this level of containment?

YES, date of most recent biosafety inspection: _December 10, 2010

NO, please certify

NOT REQUIRED for Level 1 containment

13.3 Please indicate permit number (not applicable for first time applicants): R-06-000599

14.0 Procedures to be Followed

14.1 Please describe additional risk reduction measures will be taken beyond containment level 1, 2, 2+ or 3 measures, that are unique to this agent.

_____ N/A _____

14.2 Please outline what will be done if there is an exposure to the biological agents listed, such as a needlestick injury or an accidental splash:

__Staff have been trained to do the following: get immediate medical attention at either LHSC_ Occupational Health and Safety or Victoria Emergency, visit Occ Health as soon as possible, and file an LHSC incident report. UWO employees are asked to visit UWO Occ Health to file an incident report.

14.3 As the Principal Investigator, I will ensure that this project will follow the Western Biosafety Guidelines and Procedures Manual for Containment Level 1 & 2 Laboratories (and the Level 3 Facilities Manual for Level 3 projects). I will ensure that UWO faculty, staff and students working in my laboratory have an up-to-date Hazard Communication Form, found at <http://www.wph.uwo.ca/>

Osteosarcoma SaOS-2
Ovarian carcinoma OV-90
Pancreatic carcinoma PANC-1, Panc 02.03, Panc 03.27, Panc 10.05
Prostate carcinoma DU145, LNCaP; (untransformed prostate epithelial HPEpiC)
Small cell lung carcinoma DMS114, DMS153, H69, SHP-77
Squamous cell carcinoma, gingival HN-5a
Squamous cell carcinoma, head and neck Cal27, Detroit562, FaDu, SCC9
Testicular Leydig cell tumour line MA10
Umbilical vein epithelial cell (HUVEC) (non-tumour)

Rodent:

Mouse kidney primary
Mouse embryonic fibroblast (MEF)
Mouse mammary tumour 2305
Mouse melanoma B16 F10
Chinese hamster ovary

Insect:

SF9

Bacteria:

Escherichia coli DH5-alpha and DH10-beta

On 9/27/2011 5:53 PM, Peter Ferguson wrote:

Thank you, Jennifer. I have attached a gif file of the lentivirus map. If you double-click on it, it should open with Internet Explorer, or else you can reply to open with that if it asks you. It has a lot of faint colours in it, so I did not want to scan a print of it, because I don't think it would scan well. I lifted this image from the ABM website, the company that supplied it, so no choice in the colours.

Thanks for looking after the E1A and SV40 check. I was forgetting that E1A is in the adeno that I use. As for SV40, I see that the hTERT-lentivirus vector has an SV40 promoter in it, but I do not see an ORF for the large T-antigen itself, which is what the BARF asks. If this is expressed, please let me know, since I need to know that for the purposes of my experiment, as it could affect cell behaviour. Perhaps the committee member that brought this up could double-check on that and get back to me if it is in fact true.

Thanks again. See you at our next meeting.

Cheers,
Pete

Burlington, Ontario L7L 5R2

By Facsimile: (289) 288-0020

SUBJECT: Importation of *Escherichia coli* strains

Dear Ms. Survery / Mr. Decosimo:

Our office received your query about the importation of *Escherichia coli* from the American Type Culture Collection (ATCC) located in Manassas, Virginia, United States. The following *Escherichia coli* strains are considered to be level 1 animal pathogens:

- | | | | | |
|---------------|--------------------|-----------|-------------------|----------------|
| • 5K | • CIE85 | • J52 | • MC4100 (MuLac) | • U5/41 |
| • 58 | • DH1 | • J53 | • MG1655 | • W208 |

The Office of Biohazard Containment and Safety (BCS) of the Canadian Food Inspection Agency (CFIA) only issues import permits for microorganisms that are pathogenic to animals, or parts of microorganisms that are pathogenic to animals. As the products listed above are not considered pathogenic to animals, the Office of BCS does not have any regulatory requirements for their importation.

Please note that other legislation may apply. You may wish to contact the Public Health Agency of Canada's (PHAC) Office of Laboratory Security at (613) 957-1779.

Note: Microorganisms pathogenic to animals and veterinary biologics require an import permit from the CFIA.

Sincerely,

Cinthia Labrie
Head, Animal Pathogen Importation Program
Office of Biohazard Containment & Safety

MATERIAL SAFETY DATA SHEET

MSDS FOR ANIMAL CELL CULTURES (Biosafety Level 1 or 2)

MATERIAL SAFETY DATA SHEET

SECTION 1 - SUBSTANCE IDENTITY AND COMPANY INFORMATION

Product Name: Various Animal Cell Cultures at Biosafety Level 1 or 2
ATCC Catalog #: Various

COMPANY INFORMATION: AMERICAN TYPE CULTURE COLLECTION
PO BOX 1549
MANASSAS, VA 20108

FOR INFORMATION CALL: 800-638-6597 or 703-365-2700
AFTER-HOURS CONTACT: 703-365-2710
CHEMTREC EMERGENCY: 800-424-9300 or 703-527-3887

SECTION 2 - COMPOSITION/INFORMATION ON INGREDIENTS

Either frozen or growing cells shipped in liquid cell culture medium (a mixture of components that may include, but is not limited to: inorganic salts, vitamins, amino acids, carbohydrates and other nutrients dissolved in water). Frozen Cultures may also contain a 5%-10% solution of Dimethyl sulfoxide as a cryoprotectant.

SECTION 3 - HAZARD IDENTIFICATION

HMIS Rating: Health: 0 Flammability: 0 Reactivity: 0
NFPA Rating: Health: 0 Flammability: 0 Reactivity: 0

This substance is not hazardous as defined by OSHA 29CFR 1910.1200 however this product should be handled according to good lab practices, with proper personal protective equipment, proper engineering controls and within the parameters of the purchaser's safety program.

Health Hazards

For Biosafety Level 1 Cell Cultures

Handle as a potentially biohazardous material under at least Biosafety Level 1 containment.

This cell line is not known to cause disease in healthy adult humans. These cells have **NOT** been screened for Hepatitis B, human immunodeficiency viruses or other adventitious agents, unless otherwise reported on the Certificate of Analysis. Regardless of results reported on the Certificate of Analysis Universal Precautions according to 29 CFR 1910.1030 should be followed at all times when manipulating these cell lines.

See next page for Biosafety Level 2 cell cultures.

MATERIAL SAFETY DATA SHEET

For Biosafety Level 2 Cell Cultures

Handle as a potentially biohazardous material under at least Biosafety Level 2 containment.

These cell lines are associated with human disease, hazards include: percutaneous injury, ingestion, mucous membrane exposure (U.S. Government Publication **Biosafety in Microbiological and Biomedical Laboratories**). These cells have **NOT** been screened for Hepatitis B, human immunodeficiency viruses or other adventitious agents, unless otherwise reported on the Certificate of Analysis. Regardless of results reported on the Certificate of Analysis Universal Precautions according to 29 CFR 1910.1030 should be followed at all times when manipulating these cell lines.

SECTION 4 -

FIRST AID MEASURES

Report to your Safety Office and Seek Medical Attention as Soon as Possible

Ingestion: If person is unconscious seek emergency medical attention; never give anything by mouth to an unconscious person. If the person is conscious wash mouth out with copious amounts of water and call a physician then administer three cupfuls of water. Do not induce vomiting unless directed to do so by a physician.

Inhalation: If person is unconscious seek emergency medical attention, if person is conscious remove to fresh air and call a physician.

Dermal exposure: Immediately wash skin with copious amounts of water followed by washing with soap and copious amounts of water. Remove all contaminated clothing.

Eye exposures: Flush eyes with copious amounts of water for at least 15 minutes with eyelids separated and call a physician.

SECTION 5 -

FIRE FIGHTING MEASURES

Flammability: Data not available

Suitable Extinguishing Media: Water spray, carbon dioxide, dry chemical powder, Halon (where regulations permit), or appropriate foam.

Protective Equipment: Wear self-contained breathing apparatus and protective clothing to prevent inhalation, ingestion, skin and eye contact.

Specific Hazard(s): Responders should take into consideration the biohazard risk associated with responding to a fire in the area where the material may be stored or handled.

MATERIAL SAFETY DATA SHEET

SECTION 6 - ACCIDENTAL RELEASE MEASURES

Procedure(s) of Personal Precaution(s): At a minimum use PPE listed in Section 8. Wear laboratory coat, gloves and eye protection. Avoid all contact.

Methods for Cleaning Up

Patient/Victim: Wash with soap and water. Work clothes should be laundered separately. Launder contaminated clothing before re-use. Do not take clothing home.

Equipment/Environment: Allow aerosols to settle; wearing protective clothing, gently cover spill with paper towel and apply 1% sodium hypochlorite, starting at perimeter and working towards the center; allow sufficient contact time before clean up (30 min).

Note: The use of additional PPE may be necessary for cleaning solutions.

SECTION 7 - HANDLING AND STORAGE

Handle and store according to instructions on product information sheet and label.

Special Requirements:

Follow established laboratory procedures when handling material.

SECTION 8 - EXPOSURE CONTROLS/PERSONAL PROTECTION

Use Personal Protective Equipment: Including Eye Protection, Chemical Resistant Gloves, and appropriate clothing to prevent skin exposure. In addition, a Respiratory protection program that complies with OSHA 29 CFR 1910.134 and ANSI Z88.2 requirements or European Standard EN 149 must be followed whenever workplace conditions warrant respirator use.

Engineering Controls: The use and storage of this material requires user to maintain and make available appropriate eyewash and safety shower facilities. Use fume hood or other appropriate ventilation method to keep airborne concentrations a low as possible.

Exposure Limits: No exposure limits for this material have been established by ACGIH, NIOSH, or OSHA.

SECTION 9 - PHYSICAL AND CHEMICAL PROPERTIES

Data Not Available

SECTION 10 - STABILITY AND REACTIVITY

Hazardous polymerization will not occur.

SECTION 11 - TOXICOLOGICAL INFORMATION

Route of Exposure

American Type Culture Collection
P.O. Box 1549
Manassas, VA 20108
July 2010

Emergency Telephone: (703) 365-2710 (24 hours)
Information Telephone: (703) 365-2700 Ext.2303

MATERIAL SAFETY DATA SHEET

Eye Contact: Data not available. Avoid eye contact.

Skin Contact: Data not available. Avoid skin contact.

Skin Absorption: Data not available. Avoid skin absorption.

Inhalation: Data not available. Avoid inhalation.

Ingestion: Data not available. Avoid ingestion.

Parenteral Exposure: Data not available. Avoid parenteral exposure.

Sensitization

Skin: Data not available

Respiratory: Data not available

Target Organ(s) or System(s): Data not available

Signs and Symptoms of Exposure

Skin and Mucous Membranes: Data not available

Respiratory: Data not available

Gastrointestinal: Data not available

Toxicity Data: Data not available

Effects of Long Term or Repeated Exposure: Data not available

Chronic Exposure–Teratogen: Data not available

Chronic Exposure–Mutagen: Data not available

Chronic Exposure–Reproductive Hazard: Data not available

SECTION 12 - ECOLOGICAL INFORMATION

No ecological information available.

SECTION 13 - DISPOSAL CONSIDERATIONS

Decontaminate all wastes before disposal (steam sterilization, chemical disinfection, and/or incineration).

Dispose of in accordance with applicable regulations.

SECTION 14 - TRANSPORT INFORMATION

Contact ATCC for transport information.

SECTION 15 - REGULATORY INFORMATION

Contact ATCC for regulatory information.

SECTION 16 - OTHER INFORMATION

MATERIAL SAFETY DATA SHEET

THE INFORMATION PRESENTED IN THIS DOCUMENT IS BELIEVED TO BE CORRECT BASED UPON DATA AVAILABLE TO ATCC. USERS SHOULD MAKE AN INDEPENDENT DECISION REGARDING THE ACCURACY OF THIS INFORMATION BASED ON THEIR NEEDS AND DATA AVAILABLE TO THEM. ALL SUBSTANCES AND MIXTURES MAY PRESENT UNKNOWN HAZARDS AND ALL NECESSARY SAFETY PRECAUTIONS SHOULD BE TAKEN. ATCC ASSUMES NO LIABILITY RESULTING FROM USING OR COMING IN CONTACT WITH THIS SUBSTANCE.

Cell Biology

ATCC® Number: **HTB-22™** Order this Item Price: **\$279.00**

Designations: MCF7

Depositors: CM McGrath

Biosafety Level: 1

Shipped: frozen

Medium & Serum: [See Propagation](#)

Growth Properties: adherent

Organism: *Homo sapiens* (human)
epithelial

Morphology:

Organ: mammary gland; breast

Disease: adenocarcinoma

Source: **Derived from metastatic site:** pleural effusion

Cell Type: epithelial

Cellular Products: insulin-like growth factor binding proteins (IGFBP) BP-2;
BP-4; BP-5

In addition to the [MTA](#) mentioned above, other [ATCC and/or regulatory permits](#) may be required for the transfer of this ATCC material. Anyone purchasing ATCC material is ultimately responsible for obtaining the permits. Please [click here](#) for information regarding the specific requirements for shipment to your location.

Permits/Forms:

Applications: transfection host ([Nucleofection technology from Lonza Roche Transfection Reagents](#))

Receptors: estrogen receptor, expressed

TH01: 6

TPOX: 9,12

vWA: 14,15

modal number = 82; range = 66 to 87.

Cytogenetic Analysis:

The stemline chromosome numbers ranged from hypertriploidy to hypotetraploidy, with the 2S component occurring at 1%. There were 29 to 34 marker chromosomes per S metaphase; 24 to 28 markers occurred in at least 30% of cells, and generally one large submetacentric (M1) and 3 large subtelocentric (M2, M3, and M4) markers were recognizable in over 80% of metaphases. No DM were detected. Chromosome 20 was nullisomic and X was disomic.

THO1: 6,7
TPOX: 8,11
vWA: 16,18

modal number = 56; range = 55 to 62
The cell line is aneuploid human female (XX), with most chromosome counts in the 55 to 60 range. Normal chromosomes N6, N11, and N22 were absent, while chromosomes N7, N13, N18 and N21 were single. Most of the remainder of normal chromosomes were usually paired, but chromosome N2 was triple. Nineteen marker chromosomes were identified, with most of them formed from structural alterations of the missing copies of the normal chromosomes. Six of these markers involve regions of chromosome N7, while three are recognized as derivatives of chromosome N6. Regions of a third copy of the normal and paired chromosomes N3, N15, N17, N20 are noted in markers M1, M2, M15, and M5, respectively.

D7S820: 8,9

THO1: 7,9.3

TPOX: 8,9

vWA: 15,18

Cytogenetic Analysis:

The cell line is aneuploid female (modal number = 64, range = 52 to 68), with chromosome counts in the near-triploid range. Normal chromosomes N8 and N15 were absent. Eleven stable rearranged marker chromosomes are noted as well as unassignable chromosomes in addition to the majority of autosomes that are trisomic. Many of the marker chromosomes are identical to those shown in the karyotype reported by K.L. Satya-Prakash, et al.

vWA: 18

modal number = 64; range = 60 to 67.

Cytogenetic Analysis: The cell line is aneuploid human, presumably female (X, abnormal X) with most chromosome counts in the hypotriploid range.; Normal chromosomes X, N2, N3, N7, N8, N10, and N22 are clearly under-represented due to their involvement in the formation of the many marker (19) chromosomes present in this cell line.; A normal chromosome N1 (or two) is identified in each karyotype, but, in addition, regions of chromosome N1 are also present in five different marker chromosomes.; Variation is evident in the normal and marker chromosome copy number from karyotype to karyotype.

Cellular Products: secretory component of IgA; carcinoembryonic antigen (CEA); transforming growth factor beta binding protein; mucin

Permits/Forms: In addition to the [MTA](#) mentioned above, other [ATCC and/or regulatory permits](#) may be required for the transfer of this ATCC material. Anyone purchasing ATCC material is ultimately responsible for obtaining the permits. Please [click here](#) for information regarding the specific requirements for shipment to your location.

Restrictions: The cells are distributed for research purposes only. The Memorial Sloan-Kettering Cancer Center releases the line subject to the following: 1.) The cells or their products must not be distributed to third parties. Commercial interests are the exclusive property of Memorial Sloan-Kettering Cancer Center. 2.) Any proposed commercial use of these cells must first be negotiated with The Director, Office of Industrial Affairs, Memorial Sloan-Kettering Cancer Center, 1275 York Avenue, New York, NY 10021; phone (212) 639-6181; FAX (212) 717-3439.

Isolation: **Isolation date:** 1964

Applications: transfection host ([Nucleofection technology from Lonza Roche Transfection Reagents](#))

human adrenergic alpha2A [23560]

Receptors: urokinase receptor (u-PAR)

vitamin D (moderate expression)

urokinase receptor (u-PAR); vitamin D (moderate expression)

Tumorigenic: Yes

Oncogene: myc +; ras +; myb +; fos +; sis +; p53 +; abl -; ros -; src -

Antigen Expression: Blood Type A; Rh+; HLA A1, A3, B12, B17, Cw5

DNA Profile (STR): D5S818: 10,11
 D7S820: 11,12
 TH01: 8,9
 TPOX: 8,9
 vWA: 17,22

Cytogenetic Analysis: The stemline chromosome number is near diploid with the modal number at 45 (62%) and polyploids occurring at 6.8%. The markers 10q+ and t(?8p;18q) are present in all metaphases and t(9q;?16p-), in 80% of the cells karyotyped. N16 is monosomic in the presence of, but disomic in the absence of t(9q;?16p-). N10 and N18 are monosomic and other chromosomes from those mentioned above are disomic. Q-band observations revealed the presence of the Y chromosome, but not in all cells (50% of cells lacked the Y in G-band karyotypes).

ATCC® Number: **CRL-1739™** Order this Item Price: **\$279.00**

Designations: AGS
 Depositors: SC Barranco
Biosafety Level: 2
 Shipped: frozen
 Medium & Serum: [See Propagation](#)
 Growth Properties: adherent
 Organism: *Homo sapiens* (human)
 Morphology: epithelial

Source: **Organ:** stomach
Disease: gastric adenocarcinoma

Permits/Forms: In addition to the [MTA](#) mentioned above, other [ATCC and/or regulatory permits](#) may be required for the transfer of this ATCC material. Anyone purchasing ATCC material is ultimately responsible for obtaining the permits. Please [click here](#) for information regarding the specific requirements for shipment to your location.

Isolation: **Isolation date:** 1979

Applications: transfection host ([Nucleofection technology from Lonza](#))

Tumorigenic: Yes

Cytogenetic Analysis: This is a hyperdiploid human cell line. The modal chromosome number was 49, occurring in 60% of cells. The rate of polyploidy was 3.6%. Single copy each for der(8)t(1;8)(q12;p23), der(19)t(19;?) (q13.6;?), minute chromosome M3, and C-group-like M12 was seen in all cells. The origins of both M3 and M12 defied identification presently. The t(13q14q) occurred in some. Generally there were three copies for N20, and single copy for X, N8 and N18. Occasionally there were three copies for N14.

Age: 54 years

Gender: female

Ethnicity: Caucasian

Comments: The AGS cell line was derived from fragments of a tumor resected from a patient who had received no prior therapy. The cells have a plating efficiency of 34% in the medium below. The line was cured at the ATCC of a prior mycoplasma infection. Subsequently, AGS has been determined to be infected with Parainfluenza type 5 (PIV5 formerly known as SV5). [PubMed: 17509637]

Propagation: **ATCC complete growth medium:** The base medium for this cell line is ATCC-formulated F-12K Medium, Catalog No. 30-2004. To make the complete growth medium, add the following components to the base medium: fetal bovine serum to a final concentration of 10%.
Temperature: 37.0°C

ATCC® Number: **HTB-135™** Order this Item Price: **\$329.00**

Designations: Hs 746T
 Depositors: RB Owens
Biosafety Level: 1
 Shipped: frozen
 Medium & Serum: [See Propagation](#)
 Growth Properties: adherent
 Organism: *Homo sapiens* (human)
 Morphology: epithelial

Source: **Organ:** stomach
Disease: gastric carcinoma
Derived from metastatic site: left leg
 In addition to the [MTA](#) mentioned above, other [ATCC and/or regulatory permits](#) may be required for the transfer of this ATCC material. Anyone purchasing ATCC material is ultimately responsible for obtaining the permits. Please [click here](#) for information regarding the specific requirements for shipment to your location.

Permits/Forms:

Isolation: California, United States
Isolation date: 1973

Tumorigenic: Yes
 Amelogenin: X,Y
 CSF1PO: 10,12
 D13S317: 10
 D16S539: 11
 DNA Profile (STR): D5S818: 11,13
 D7S820: 8
 TH01: 9
 TPOX: 8,10
 vWA: 15,17

Cytogenetic Analysis: This is a hypertriploid human cell line having the modal chromosome number of 77 occurring in 46% of cells. Cells with higher ploidies were found at 16.6%. The karyotype of this cell line is very complex. Between 45% and 55% of chromosomes in each cell had structural aberrations, including: der(4)t(1;4) (p13.1;q35); t(15q22q); del(2) (p13); der(7)t(7;?) (p22;?) [7p+]; t(7q22q?) and others. The t(15q22q), del(2), and t(7q22q?) (and several others) had two copies in most cells. There were two types of der(7): one was the 7p+ described above; the other, 7p++, was distinctly longer than N1. There were more than ten markers that were present in some cells only. One DM-like chromosome was found in most cells. Normal N7 and N21 were absent. One normal X and one or two normal Y chromosomes were detected.

Age: 53 years
 Gender: male

Propagation: **ATCC complete growth medium:** The base medium for this cell line is ATCC-formulated Dulbecco's Modified Eagle's Medium, Catalog No. 30-2002. To make the complete growth medium, add the following components to the base medium: fetal bovine serum to a final concentration of 10%.

Temperature: 37.0°C

Protocol: Remove medium, and rinse with 0.25% trypsin, 0.03% EDTA solution. Remove the solution and add an additional 1 to 2 ml of trypsin-EDTA solution. Allow the flask to sit at room temperature (or at 37C) until the cells detach.

Subculturing: Add fresh culture medium, aspirate and dispense into new culture flasks.

Subcultivation Ratio: A subcultivation ratio of 1:3 to 1:8 is recommended

Medium Renewal: Every 2 to 3 days

Preservation: **Freeze medium:** culture medium 95%; DMSO, 5%
Storage temperature: liquid nitrogen vapor phase

Isolation:	Isolation date: 1972			
Applications:	transfection host (Nucleofection technology from Lonza Roche Transfection Reagents) Amelogenin: X,Y CSF1PO: 10,12 D13S317: 11 D16S539: 11,12			
DNA Profile (STR):	D5S818: 11 D7S820: 8,11 TH01: 8,9.3 TPOX: 8,11 vWA: 14			
Cytogenetic Analysis:	This is a hypotriploid human cell line with the modal chromosome number of 66, occurring in 24% of cells. Cells with 64 (22%), 65, and 67 chromosome counts also occurred at relatively high frequencies; the rate with higher ploidies was low at 0.4%. There were 6 markers present in single copies in all cells. They include der(6)t(1;6) (q11;q27); ?del(6) (p23); del(11) (q21), del(2) (q11), M4 and M5. Most cells had two X and two Y chromosomes. However, one or both Y chromosomes were lost in 40% of 50 cells analyzed. Chromosomes N2 and N6 had single copies per cell; and N12 and N17 usually had 4 copies.

 TPOX: 8
 vWA: 17

Cytogenetic Analysis: modal numbr = 57; range = 53 to 65. This is a hypotriploid human cell line. The modal chromosome number is 57 although cells with 58 chromosomes occurred with a comparable frequency. The frequency of higher ploidies was 1.7%. Seven marker chromosomes, der(9)t(1;9)(q21;p24), der(9)t(7;9)(p11;p22), t(10q14q), der(16)t(7;16)(q11.23;q22), a small ring (about 1/2 the size of a G chromosome) and two others, were common to all cells. Three other markers were found in some cells only. The markers, t(7;9) and t(7;16) were mostly paired. Normal N9 was absent, and N7 and N16 had only a single copy per cell. Two copies each of the X and the Y were present in all cells.

Cytogenetic Analysis: This is a hypotriploid human cell line. The modal chromosome number is 58 occurring at 30%. The frequency of higher ploidies was 3.2%. Over 30 marker chromosomes were common to all cells, and four others were found in some cells. Among the common markers were 1q+, t(1q8q), 2q+, der(16)t(3;16)(q21;q22), der(19)t(13;19)(q21;q13), and der(5)t(5;5)(p15pq13). Generally, there were two copies of der(5) in each cell. Normal Y and D group chromosomes were absent, and the X chromosome was single.

ATCC® Number:	CRL-11732™	Order this Item	Price:	\$329.00
Designations:	OV-90			
Depositors:	University of Montreal			
<u>Biosafety Level:</u>	1			
Shipped:	frozen			
Medium & Serum:	See Propagation			
Growth Properties:	adherent			
Organism:	<i>Homo sapiens</i> (human)			
Morphology:	epithelial			
Source:	Organ: ovary Tumor Stage: grade 3, stage IIIC Disease: malignant papillary serous adenocarcinoma Derived from metastatic site: ascites			
Cellular Products:	keratin [49408] In addition to the MTA mentioned above, other ATCC and/or regulatory permits may be required for the transfer of this ATCC material. Anyone purchasing ATCC material is ultimately responsible for obtaining the permits. Please click here for information regarding the specific requirements for shipment to your location.			
Permits/Forms:				
Isolation:	Isolation date: August, 1992			
Tumorigenic:	Yes			
Oncogene:	her2/neu +, p53 (mutated, Ser --> Arg mutation at exon 6, codon 215) Amelogenin: X CSF1PO: 12,13 D13S317: 11,12 D16S539: 11			
DNA Profile (STR):	D5S818: 11,15 D7S820: 10,10.1 TH01: 9.3 TPOX: 8,10 vWA: 16,17			
Cytogenetic Analysis:	46, XX, der(1)t(1;10)(p36;p15), hsr(3)(p11), der(9;17)(q10;q10), der(10)t(10;17)(p15;p12p13), der(13)t(13;13)(p11;q14) [49408]			
Age:	64 years			
Gender:	female			
Comments:	This cell line was initiated in August of 1992 from a patient of French-Canadian descent with no family history of ovarian cancer. [49408] Like TOV-21G (ATCC CRL-11730), the OV-90 (ATCC CRL-11732) cell line exhibits a deletion at chromosome 3p24. The TOV-112D (ATCC CRL-11731) cell line does not exhibit a deletion at chromosome 3p24. [42090]

Cytogenetic Analysis: Chromosome studies indicate a modal number of 63 with 3 distinct marker chromosomes and a small ring chromosome. This is a hypertriploid human cell line. The modal chromosome number was 61, occurring in 32% of cells., However, cells with 63 chromosomes also occurred at a high frequency (22%). The rate of cells with higher ploidies was 8.5%.

Isoenzymes: G6PD, B
 Age: 56 years
 Gender: male
 Ethnicity: Caucasian
 Comments: Growth is inhibited by 1 unit/ml L-asparaginase. The cells will grow in soft agar.

The line was established from cells from a mediastinal biopsy of a patient with small cell carcinoma of the lung.

The patient had not received prior therapy.

Comments: The cells express HLA class I and class II antigens.

Early passages of the cells were contaminated with a bovine mycoplasma (*Acholeplasma laidlawii*) which was cured (prior to cryopreservation) with *A. laidlawii* antiserum and kanamycin.

modal number = 76 to 78; range = 40 to 87
 This is an aneuploid human male cell line. Monosomy of many of the normal chromosomes is noted as well as bisomy in this subtetraploid cell line; however, translocations and deletions involving many of the missing chromosomes are noted, and these chromosomal rearrangements appear to be stable and generally paired. Twelve marker chromosomes were identified including: der(16)t(1;16)(q21;q23), der(22)t(4;22)(q12;q13), der(12)t(11;12)(q23;p12), del(17)(p11), der(19)t(5;19)(? q21;q13) and others.

 Organism: *Homo sapiens* (human)
 Morphology: epithelial

Source: **Organ:** tongue
Disease: squamous cell carcinoma

Permits/Forms: In addition to the [MTA](#) mentioned above, other [ATCC and/or regulatory permits](#) may be required for the transfer of this ATCC material. Anyone purchasing ATCC material is ultimately responsible for obtaining the permits. Please [click here](#) for information regarding the specific requirements for shipment to your location.

Isolation: **Isolation date:** 1982

Tumorigenic: Yes
 Amelogenin: X
 CSF1PO: 10,12
 D13S317: 10,11
 D16S539: 11,12

DNA Profile (STR): D5S818: 11,12
 D7S820: 10
 THO1: 6,9.3
 TPOX: 8
 vWA: 14,17

Cytogenetic Analysis: aneuploid; modal number = 43

Age: 56 years

Gender: male

Ethnicity: Caucasian

Comments:

Cell Biology

ATCC® Number: **CCL-138™** Order this Item Price: **\$329.00**

Designations: Detroit 562
 Depositors: CS Stulberg
Biosafety Level: 1
 Shipped: frozen
 Medium & Serum: [See Propagation](#)
 Growth Properties: adherent
 Organism: *Homo sapiens* (human)
 Morphology: epithelial

Source: **Organ:** pharynx
Disease: carcinoma
Derived from metastatic site: pleural effusion

Cellular Products: keratin
 In addition to the [MTA](#) mentioned above, other [ATCC and/or regulatory permits](#) may be required for the transfer of this ATCC material. Anyone purchasing ATCC material is ultimately responsible for obtaining the permits. Please [click here](#) for information regarding the specific requirements for shipment to your location.

Permits/Forms:
 Virus Susceptibility: Human poliovirus 1
 Vesicular stomatitis virus

Amelogenin: X
 CSF1PO: 11,13
 D13S317: 12
 D16S539: 11
 DNA Profile (STR): D5S818: 11,12
 D7S820: 8,10
 TH01: 8,9
 TPOX: 8,10
 vWA: 16

Modal number = 64; range = 58 to 128
 Cytogenetic Analysis: A large subterminal marker chromosome, arm ratio 3:4, is found in 94% of the cells karyotyped. Five to 6 minute chromosomes are present in each cell.

Isoenzymes: G6PD, B
 Age: adult
 Gender: female
 Ethnicity: Caucasian

Comments: The cells are positive for keratin by immunoperoxidase staining.

Cell Biology

ATCC® Number: **HTB-43™** Order this Item Price: **\$329.00**

Designations: FaDu
 Depositors: SR Rangan
Biosafety Level: 1
 Shipped: frozen
 Medium & Serum: [See Propagation](#)
 Growth Properties: adherent
 Organism: *Homo sapiens* (human)
 Morphology: epithelial

Source: **Organ:** pharynx
Disease: squamous cell carcinoma

Permits/Forms: In addition to the [MTA](#) mentioned above, other [ATCC and/or regulatory permits](#) may be required for the transfer of this ATCC material. Anyone purchasing ATCC material is ultimately responsible for obtaining the permits. Please [click here](#) for information regarding the specific requirements for shipment to your location.

Applications: transfection host ([Roche Transfection Reagents](#))
 Tumorigenic: Yes

Amelogenin: None detected
 CSF1PO: 12
 D13S317: 8, 9
 D16S539: 11
 DNA Profile (STR): D5S818: 12
 D7S820: 11, 12
 TH01: 8
 TPOX: 11
 vWA: 15, 17, 18

Cytogenetic Analysis: (P16) hypodiploid to hypertriploid with modal number = 64

Isoenzymes: AK-1, 1
 ES-D, 1
 G6PD, B
 GLO-I, 2
 Me-2, 2
 PGM1, 2
 PGM3, 1

Age: 56 years
 Gender: male
 Ethnicity: Caucasian

Comments: The FaDu line was established in 1968 from a punch biopsy of an hypopharyngeal tumor removed from a Hindu patient. The established line was found to contain bundles of tonofilaments in the cell cytoplasm and desmosomal regions were prominent at cell boundaries.

Cell Biology

ATCC® Number: **CRL-1629™** Order this Item Price: **\$329.00**

Designations: SCC-9

Depositors: JG Rheinwald

Biosafety Level: 1

Shipped: frozen

Medium & Serum: [See Propagation](#)

Growth Properties: adherent

Organism: *Homo sapiens* (human)

Morphology:

Source: **Organ:** tongue
Disease: squamous cell carcinoma

Cellular Products: epidermal keratins; low levels of involucrin
In addition to the [MTA](#) mentioned above, other [ATCC and/or regulatory permits](#) may be required for the transfer of this ATCC material. Anyone purchasing ATCC material is ultimately responsible for obtaining the permits. Please [click here](#) for information regarding the specific requirements for shipment to your location.

Applications: transfection host ([Roche Transfection Reagents](#))

Tumorigenic: Yes
Amelogenin: X,Y
CSF1PO: 11
D13S317: 9
D16S539: 10,11

DNA Profile (STR): D5S818: 12
D7S820: 8
THO1: 8,9
TPOX: 9,11
vWA: 17

Age: 25 years

Gender: male

Comments: Growth of SCC-9 is enhanced by using a feeder layer of X-irradiated STO cells (ATCC 56-X).
The cells do not grow well in semi-solid medium.

Propagation: **ATCC complete growth medium:** A 1:1 mixture of Dulbecco's modified Eagle's medium and Ham's F12 medium containing 1.2 g/L sodium bicarbonate, 2.5 mM L-glutamine, 15 mM HEPES and 0.5 mM sodium pyruvate supplemented with 400 ng/ml hydrocortisone, 90%; fetal bovine serum, 10%
Temperature: 37.0°C

Subculturing:

Cell Biology

ATCC® Number: **CRL-2214™** Price: **\$429.00**

Designations: MEF-1
 Depositors: TE Willnow
Biosafety Level: 2 [CELLS CONTAIN PAPOVAVIRUS]
 Shipped: frozen
 Medium & Serum: [See Propagation](#)
 Growth Properties: adherent
 Organism: *Mus musculus* (mouse)
 Morphology: fibroblast

Source: **Cell Type:** fibroblastSV40 transformed

In addition to the [MTA](#) mentioned above, other [ATCC and/or regulatory permits](#) may be required for the transfer of this ATCC material. Anyone purchasing ATCC material is ultimately responsible for obtaining the permits. Please [click here](#) for information regarding the specific requirements for shipment to your location.

Age: embryo

The MEF-1 cell line was initiated in 1993 by transfection of mouse embryo fibroblasts with an SV40 coding plasmid. The cells are wild-type for the low density lipoprotein receptor related protein (LRP).

Comments: This cell line along with the PEA 10 (see ATCC [CRL-2215](#)) and PEA 13 (see ATCC [CRL-2216](#)) cell lines constitute a genetically defined system to study the endocytosis of ligands by the LRP.

The above cell lines are the only available experimental system to study the effect of LRP deficiency because LRP deficient mouse embryos die in utero.

Propagation: **ATCC complete growth medium:** The base medium for this cell line is ATCC-formulated Dulbecco's Modified Eagle's Medium, Catalog No. 30-2002. To make the complete growth medium, add the following components to the base medium: fetal bovine serum to a final concentration of 10%.

Temperature: 37.0°C

Protocol: Remove medium, rinse flask with fresh 0.25% trypsin, 0.02% EDTA and remove trypsin, Add an additional 1 to 2 ml of trypsin solution, and allow the flask to sit at room temperature (or 37C) until the cells detach. Add fresh medium, aspirate and dispense into new flasks.

Subculturing: **Subcultivation Ratio:** A subcultivation ratio of 1:6 to 1:10 is recommended

Medium Renewal: Every 2 to 3 days

Preservation: Culture medium, 95%; DMSO, 5%

Cell Biology

ATCC® Number: **CCL-61™** Order this Item Price: **\$279.00**

Designations: CHO-K1

Depositors: TT Puck

Biosafety Level: 1

Shipped: frozen

Medium & Serum: [See Propagation](#)

Growth Properties: adherent

Organism: Cricetulus griseus (hamster, Chinese)
epithelial-like

Morphology:

Source: **Organ:** ovary

In addition to the [MTA](#) mentioned above, other [ATCC and/or regulatory permits](#) may be required for the transfer of this ATCC material. Anyone purchasing ATCC material is ultimately responsible for obtaining the permits. Please [click here](#) for information regarding the specific requirements for shipment to your location.

Isolation: **Isolation date:** 1957

Applications: transfection host ([Nucleofection technology from Lonza Roche Transfection Reagents](#))

Virus Resistance: poliovirus 2; modoc virus; Button Willow virus

Cytogenetic Analysis: Chromosome Frequency Distribution 50 Cells: 2n = 22.
Stemline number is hypodiploid.

Gender: female

Comments: The CHO-K1 cell line was derived as a subclone from the parental CHO cell line initiated from a biopsy of an ovary of an adult Chinese hamster by T. T. Puck in 1957. [22224]
The cells require proline in the medium for growth. [25976]

Propagation: **ATCC complete growth medium:** The base medium for this cell line is ATCC-formulated F-12K Medium, Catalog No. 30-2004. To make the complete growth medium, add the following components to the base medium: fetal bovine serum to a final concentration of 10%.
Temperature: 37.0°C
