Office Hours (UC 3126):
My scheduled office hours will be posted on the OWL site. I am also available by appointment – e-mail me and we can arrange a time to meet.

Course Description:
This course offers students the opportunity to explore foundational research as well as some of the most recent work on language and society, with a particular focus on the theory, methodology and findings of sociolinguistic research on language variation and change.

Students will carry out an empirical analysis of a set of language data as part of their course project or do a critical survey of the literature to argue a position on a given sociolinguistic topic. Through bibliographic research and a class presentation, they will progress incrementally in their research on their chosen topic throughout the course, and this work will culminate in a final paper.

While some “classic” work in sociolinguistics will be read and reviewed, a significant proportion of our effort in the course will be devoted to studying some of the most recent research in the field.

*The language of instruction will be English but students have the option of submitting written work in English, French or Spanish. Students in French Studies graduate programs are required to submit all written work in French.*

Weighting of Graded Assignments:
Chapter presentation: 10%
Bibliography assignment: 20%
Abstract: 10%
Oral presentation: 20%
Research paper: 40%
Readings:
Readings are posted on the course OWL Site. There will be approximately 30 articles and book chapters assigned as required reading, and some optional readings on topics studied will also be made available on the site, or can be found in the Western Libraries system. Students will do readings in addition to these on a topic of their choice for course assignments.

Assignments:
Article or chapter presentation (to be scheduled to take place in February)
Each student registered in the course will present an overview of an article or chapter, and lead a discussion on it. No more than one week in advance of the class in which you are to present, you will submit a list of questions (three to five of them) to be distributed to the class, to serve as a basis for the discussion. Your presentation should be ten to fifteen minutes in length. Articles and chapters from which to choose for this assignment will be posted on the OWL site, and a Wiki page for signing up for a presentation date and chapter/article will be made available on the OWL site.

Reference list on chosen topic (OPTIONAL, NO MARK ASSIGNED: due February 15)
As a preliminary step to the annotated bibliography assignment, you may prepare a list of ten to fifteen bibliographic references related to the topic on which you plan to do your research in the course. You may also draft a short paragraph describing the topic. Be sure to pay careful attention to the format of the bibliographic references.

Annotated bibliography assignment (due March 1)
You are asked to prepare an annotated bibliography on your topic. Please see guidelines posted on the OWL site.

Abstract: (due March 15)
You are asked to prepare an abstract of the research you plan to do for the presentation and the research paper. Please see guidelines posted on the OWL site.

Presentation (April 3)
You are asked to make a presentation to the class, about 15 minutes in length (followed by 5 minutes of discussion), in which you will present the sociolinguistic issue(s) that you are studying. Please see guidelines posted on the OWL site.

Research Paper (due April 30)
This assignment involves preparing a well-structured research paper on a sociolinguistic topic, of about 15 pages in length (double-spaced, 12-point format). Possible approaches:
- A synthesis of the research on a particular issue: establish a position (thesis) on the question and argue your position while critically reviewing the relevant research
- An empirical study of data from a linguistic corpus. You must pay careful attention to the information below on research ethics if you are gathering a corpus, or making any other use of human subjects.
Format for Submission of Written Assignments:
The preferred means for submission of written work in the course is as a word processing file (Microsoft Word) sent to the instructor via the OWL site on the Assignments page. This saves paper resources and facilitates the provision of timely and detailed feedback.

Submission Deadlines:
All work in graduate courses must be submitted by the deadline set by the instructor. “Incompletes” will not be permitted without medical documentation. In order to continue to receive financial support from the School of Graduate and Postdoctoral Studies, each student must demonstrate satisfactory progression in her or his program. Regulations are available upon request from Chrisanthi Ballas in the Department of French Studies.

Bibliographic Style:
Use of bibliographic sources is essential for research at the graduate level, and there are certain conventions for referring to the literature that it is important to follow. Style guidelines vary in terms of the format of citations in the text of a paper, the use of footnotes and endnotes, and the format of bibliographical references at the end of the paper. They also set specific guidelines for the format of subheadings, examples, tables and graphic illustrations, among other elements. The prescribed style guidelines for this course are those of the Canadian Journal of Linguistics, which can be found on the course OWL site. You are advised to adhere to this style sheet as consistently as possible. You should focus on the minute details of style at the right stage in the drafting of your work, without losing sleep over them; fine-tuning of bibliographic style is for final editing, but should not be neglected. While you will not be severely penalized for falling short of perfection on such points of detail, it is expected that your work will demonstrate due attention to them. Appropriately acknowledging all sources is of course a requirement, and failure to do so can constitute plagiarism.

Plagiarism and other Scholastic Offences:
It is expected that graduate students will be aware of the regulations regarding plagiarism and other scholastic offences that are to be avoided. Here the text that the Senate recommends we include in all course outlines: “Scholastic offences are taken seriously and students are directed to read the appropriate policy, specifically, the definition of what constitutes a Scholastic Offence, at the following Web site: http://www.uwo.ca/univsec/handbook/appeals/scholoff.pdf”

Research Ethics:
For your Research Paper, you may wish to do an empirical study of data you gather from human subjects. If you choose such a topic for your Research Paper, you must obtain ethics approval from the instructor before beginning your work with human subjects.

Information on Western’s policy governing ethical research involving humans can be found on the Office of Research Ethics website: http://www.uwo.ca/research/ethics/

Before undertaking research involving human subjects, please read the instructions below, and complete the tutorial at the following URL: http://tcps2core.ca/welcome

Instructions to Student Researchers Whose Research Papers Involve Use of Human Subjects
The following instructions are a supplement to the description of the Research Paper found in the syllabus and on the OWL site. They apply to all assignments done for the course involving work with human subjects.

a) The purpose of the project is to carry out a research project in the field of sociolinguistics by means of interviews and/or questionnaire used to gather data on participants’
language use patterns or perception of language forms.

b) Once potential participants have been given the Letter of Information and had all of their
questions answered to their satisfaction, you ask them to sign the Consent Form if they
consent to participate. You must prepare the Letter of Information and Consent Form
using the models provided on the REB website (copies are posted on the course OWL
site in the Ethics folder under Resources). These must be submitted to the instructor for
advance approval, and you must not begin participant recruitment or data collection
until after this approval has been obtained.

c) Participants can be recruited from among your friends, family, classmates, roommates,
acquaintances, or people you do not know. Please note criterion 3 in the Guidelines,
which states that participants must be adults and must be “capable of free and informed
consent.” Be sure to read the Guidelines thoroughly. You invite people to participate by
explaining the purpose of the project and providing a copy of the Letter of Information
(see section c) below for more information about this Letter). Please remember that
"snowball" recruitment (i.e. obtaining participants contact information of other potential
participants) is not permitted unless it is "mediated" i.e. potential participants are given the
researcher's contact info and have the option to contact them or not, but the researcher
doesn't receive their contact info.

d) Since this project will likely involve only one session with each participant, it is not
anticipated that a participant will withdraw part way through. If a participant does
withdraw, assume that you cannot use any data gathered from the participant, and
consult the instructor for advice. You may encounter participants who don’t want to finish
their interviews (for whatever reason). They should be given the option of asking for their
recording to be erased, or for the recorded interview up until that point to be used.

e) There is no formal requirement for debriefing (informing participants of the results of the
research). If you do decide to do so, be sure to submit the proposed summary of the
results to the instructor for approval before giving it to participants.

f) You must take care to maintain data confidentiality. You must not identify participants by
name in your paper or anywhere else; rather, use pseudonyms to protect anonymity and
confidentiality when reporting on the results of your study. Any data you have allowing
participants to be identified should be encrypted and destroyed when it is no longer
needed.

g) Please note the following important note in the Guidelines regarding risk: “The research
projects must be no more than minimal risk. The standard of minimal risk is defined as
follows: If potential participants can reasonably be expected to regard the probability and
magnitude of possible harms implied by the participation in the research to be no greater
than those encountered by the subject in his or her everyday life that relate to the
research then the research can be regarded as within the range of minimal risk.”
