**DESCRIPTION**

Will robots take all our jobs? Will humans become cyborgs? Will nano-technology revolutionize medicine? As we rely more and more on machines and other new technologies, they are changing how we interact with the world and one another. In this course we will consider the impact of artificial intelligence on our current lives, and on our future. It has been said that “Philosophy will be the key that unlocks artificial intelligence”—presumably for the better. On the other hand, the Oxford philosopher Nick Bostrom has warned that advances in superintelligence may soon make humans obsolete. Who should we believe? This course will address these and other issues by first considering some traditional questions in philosophy of mind—e.g., Can a robot think? What is the Turing Test? Can machines ever be conscious?—before turning to a consideration of some of the ethical and social implications of this new technology.
