Purpose / Scope

This policy provides a framework for the establishment and maintenance of a post approval monitoring (PAM) program for all animal-based science within Western’s Research Community.

PAM will be undertaken citywide using a number of approaches, including
• operational activities involving trained, experienced staff who regularly interact with live animals under their care during:
  o model development and refinement support
  o animal procurement oversight
  o daily health checks by trained Animal Care staff
  o Facility rounds by Laboratory Animal Facility supervisors
  o Sick Animal Response involving animal health professionals,
  o regular interactions between ACC leadership and research personnel; and
• regular PAM reviews, as outlined within the Procedures for Post Approval Review (PROC-005):
  o rounds by citywide institutional animal health professionals
  o Animal Use Protocol audits
  o ACC-directed visits by designated animal health professionals
  o ACC Site Visits, and
  o Field research evaluations

Policy Statements

General

Following the approval of an Animal Use Protocol (AUP) by the Animal Care Committee (ACC), the animal-based scientist must endeavour to undertake his/her AUP in practice as approved in principle, and support the oversight of his/her animal care and use by arms-length designates of the Animal Care Committee (ACC) and University Veterinarian.

Post approval monitoring must be undertaken using a collaborative approach by all responsible parties – animal-based scientists, ACC leaders, Institutional Veterinarians, Laboratory Animal Facility Supervisors, and their respective designates – to identify and correct all variances from approved AUPs, institutional policies and procedures and/or current veterinary standards, and to prevent and/or relieve unnecessary animal pain and suffering.
  • Any issues identified during PAM Reviews must be communicated and resolved by those responsible in a timely manner.

Post approval monitoring must be undertaken by arms-length designates of the ACC, who must ensure that all animal holding and use areas, including procedure rooms, are visited with a frequency proportional to risks to animal health and welfare.
  • ACC Leaders and Institutional Veterinarians must have unrestricted access at all times to all areas where animals are held or used.
The degree of risk to animal health and welfare must be outlined within the PAM Risk Analysis Record, which will be maintained by the University Veterinarian, or designate, and reviewed annually by the ACC Executive to ensure it reflects current risk levels and locations.

PAM activities must be documented by accountable parties; associated logs and/or reports must be centrally maintained for regulatory reporting purposes, and made readily available to the ACC, the Vice President (Research) and external regulators upon request.

Rationale

The Canadian Council on Animal Care's (CCAC) Policy Statement for Senior Administrators Responsible for Animal Care and Use Programs states that, “each institution must establish procedures for post-approval monitoring of animal use protocols, and must define the roles and responsibilities of the members of the animal care and use program in the monitoring process.”

Sections 16 and 17 of the Animals for Research Act, R.S.O. 1990, c. A.22 require the Animal Care Committee to establish “procedures for the prevention of unnecessary pain including the use of anaesthetics and analgesics.”

Regular onsite presence facilitates a proactive rather than reactive approach to animal-based science compliance and best practices advancement and fosters a collaborative approach to CCAC- and Ontario Ministry of Agriculture, Food, and Rural Affairs (OMAFRA)-mandated post approval monitoring.

Ongoing ACC member and Institutional Veterinarian presence is required to

- facilitate effective communication;
- provide meaningful support for all involved stakeholders;
- help ensure that animal environment, health and welfare issues do not arise and/or are promptly addressed;
- identify and quickly resolve Concerns, Animal Use Protocol (AUP) drift and/or animal facility concerns; and
- address questions from Laboratory Animal Facility Supervisors and Principal Investigators.
